Release 2.9.4.0

BEN-5516: The restitution service fee is not included in the total amount due when looking up a case that has restitution owed on the case.

Expected Result: When calculating the total amount due, the restitution service fee should be included in the total amount due.

Resolution: When calculating the total amount due, the restitution service fee will be included in the total amount due if restitution fees are owed on the case and restitution has a related service fee configured that adds as a non-case fee when restitution is paid.

Important: After updating the service, the 'Enable 32-Bit Applications' setting of the application pool running the credit card web service should be set to False.

This document may contain confidential and/or proprietary information and is intended to be used only by licensed Benchmark users.

Release 2.9.3.0

Add logging to tblServiceLog when saving phone number.

Expected Result: When saving phone numbers received by the payment provider when posting a payment, service log records should be created to capture the actions taken by the credit card web service.

Resolution: When saving phone number records, service log records are now written to tblServiceLog including the phone number.

This document may contain confidential and/or proprietary information and is intended to be used only by licensed Benchmark users.

Release 2.9.2.0

Save HOME and MOBILE phone numbers to tblPartyPhone when processing payments received by the payment provider.

Expected Result: Phone numbers captured by the payment provider and pushed to the credit card web service in a PostPayment call should be saved to the party email table.

Resolution: HOME and MOBILE phone numbers are now saved to tblPartyEmail if provided in the XML sent to the PostPayment method.

This document may contain confidential and/or proprietary information and is intended to be used only by licensed Benchmark users.

Release 2.9.1.0

109056: Cases are not auto-disposed properly when payment processed by the PostPayment method.

Expected Result: Cases should be auto-disposed if the court type of the case has auto-disposition rules configured, and the case is paid in full.

Resolution: Corrections made so that auto-disposition rules are applied when a case is paid in full.

This document may contain confidential and/or proprietary information and is intended to be used only by licensed Benchmark users.

Release 2.9.0.0

Add ability to process a real time payment made on a payment provider public facing web kiosk.

Expected Result: Payments made on a payment provider's public facing web kiosk should be posted real time in Benchmark rather than the near real time method of downloading payment files from the payment provider's ftp site and processing the payments with the Benchmark Payment Service.

Resolution: Added a new method for receiving a payment push that will process the payment and generate a receipt on the case real time.

13223: Cases that have already gone to court and been disposed are returning MustAppear = True when a case is looked up through the credit card web service.

Expected Result: Cases that have already gone to court and had all charges disposed should return MustAppear = False.

Resolution: Modified the logic to set MustAppear = False if the charges have all been disposed. If the charges are not all disposed, MustAppear will be set to True if the statute on the first charge has a CaseEventRequired value of 1, 2, or 4.
