This document may contain confidential and/or proprietary information and is intended to be used only by licensed Benchmark users.

Release 2.9.2.0

Compatible with the Benchmark Client Release v2.9.67.0 database schema or higher.

Corrected Issues

BEN-6720: JudgmentAmount not Updated with FinalJudgement in the Auction Result File

> ***Expected Result:*** tblCase.JudgmentAmount = 0 should be updated when a FinalJudgement amount is received in the Auction Result file.
>
> ***Resolution:*** Fixed issue where tblCase.JudgmentAmount was not updated**.** Moved the login code from within the block for SalePrice > 0 and WinningBidAmount > 0 to above where the JudgmentAmount is populated. After the change, the JudgmentAmount is saved on tblCase as expected.

Added Features

BEN-5845: Real Auction Service Sets the JudgmentAmount on tblCase to 0 when the JudgmentAmount is already Populated, and the Result File has a FinalJudgment Amount of 0

> ***Request Details:*** The JudgmentAmount should not be overwritten when the JudgmentAmount on tblCase is already populated, and the Result file has a FinalJudgment amount of 0.
>
> ***Resolution:*** Real Auction service will no longer change the JudgmentAmount on the case if the JudgmentAmount is already populated and the Result file has a FinalJudgment amount of 0.

This document may contain confidential and/or proprietary information and is intended to be used only by licensed Benchmark users.
Any use by others is strictly prohibited.

Release 2.9.1.0

Compatible with the Benchmark Client Release v2.9.62.0 database schema or higher.

Corrected Issues

BEN-5964: Real Auction Service Sets the Court Result to the Default Court Result when the Real Auction Result File has NoBid = true and the Status is CANCELED

> ***Expected Result:*** The Court Result should be set to CANCELED instead of the default court result.
>
> ***Resolution:*** Real Auction service will no longer set the Court Result to the default court result when NoBid is true, and the Status is CANCELED. The court result will be set to the value specified in the CancelCourtResult service setting. If the service setting does not exist, it will be set to CANCELED.

BEN-6413: Real Auction Service does not Add the Case Fees Specified in the Payment File or Process the Receipt Correctly

> ***Expected Result:*** The Real Auction service should add the fees specified in the payment file, then process a receipt to pay the fees that were added from the payment file.
>
> ***Resolution:*** Real Auction service now properly adds the fees that were included in the payment file and processes a payment against the fees that were added.
>
> ***Note:*** The Crystal Runtime version was updated in the Real Auction service to use the same version used in the latest 2.9 client, Crystal Runtime SP30. The new Crystal Runtime will need to be installed in order for receipt images to be generated correctly.

> Download link: https://downloads.ptghome.com/Downloads/CrystalRuntimeSP30.zip

Added Features

BEN-6597: Update Release Scripts

Request Details: Update release scripts in the Real Auction Installation Package.

Resolution: A new script was added, and changes were applied to existing scripts. Script 1_UpdateClientTableSchema_v2.9.62.0.sql was added to the script folder, running this script will update the database in case the current is an older version. If the current database version is higher than what is in the script, it will not change the database back to an older version.

Renamed RealAuction_CaseDetails.sql to 2_RealAuction_storedProcedures.sql. Updated 2_RealAuction_StoredProcedures.sql to include all Real Auction stored procedures and triggers.

- Creates stored procedures associated with Real Auction if they do not exist.
- Creates triggers on tblCaseEvent if they do not exist.

Renamed RealAuctionServiceSettingUpdates_20191202.sql to 3_RealAuction_ServiceSettings.sql. Updated 3_RealAuctionServiceSettings.sql to include all service settings associated with Real Auction.

- Create service record for Real Auction if it doesn't exist.
- Inserts all service settings associated with Real Auction that do not exist.

All scripts should be executed before installing the new version.

This document may contain confidential and/or proprietary information and is intended to be used only by licensed Benchmark users.
Any use by others is strictly prohibited.

Release 2.9.0.0

Compatible with Benchmark Client Release v2.7.21.7 or higher and v2.8.10.0 or higher.

Corrected Issues

108779: Check for “FinalJudgment” in Real Auction Result File

> ***Expected Result:*** Modify the processing of the Real Auction file to look for both “FinalJudgement”, and if not found, look for “FinalJudgment”. Do not set the FinalJudgment amount to 0 if an error is received.
>
> ***Resolution:*** The service will now check the XML result file for a “FinalJudgment” field for the auction’s FinalJudgement if no “FinalJudgement” field is found. If neither “FinalJudgement” nor “FinalJudgment” are found, then the value will default to 0.
>
> Also updated target framework for RealAuction.Data from .NET Framework 3.5 to .NET Framework 4.

Added Features

12972: Result RA Events Based on Specific Fees Received

Request Details: Add a setting that will control whether a payment file being received should result the Court Event or not.

Resolution: Added setting **ResultFutureEventsbyPayment**.
True – Payment file will result an event that is scheduled in the future.
False – Payment file will not result an event that is scheduled in the future.
