Release 1.5 Service Pack 43

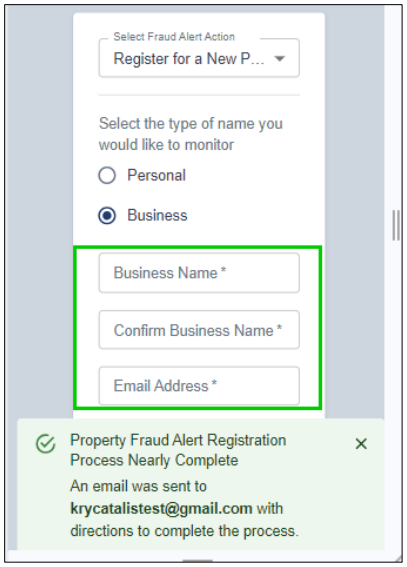

Corrected Issues

LAN-1362: Fraud Alert Fields are not Cleared Out After Business Fraud Alert Submission

Expected Result: When the user submits a new Business Fraud Alert the system should clear out all data fields filled in by the user after a successful submission.

Resolution: Fixed issue where the fields filled by the user were retaining the filled in data after pressing the "Send Confirmation Email" button on the Business Fraud Alert form, now fields are cleared out after a successful submission.

After Submission.

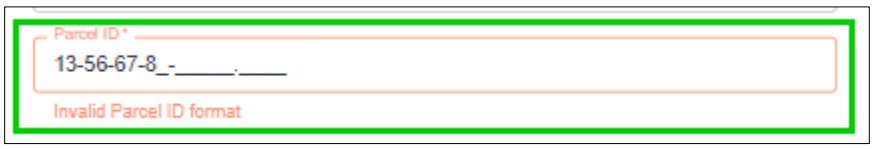

LAN-1364: Parcel ID Unclear Error Message

Expected Result: Business Fraud Alert Registration form should display an appropriate message error when the Parcel ID field is filled without honoring the format.

Resolution: Fixed issue where the message "An error occurred while processing your request" was displayed when the Parcel ID on the Business Fraud Alert Registration form was filled with an incorrect format, now the message "Invalid Parcel ID format" will appear to inform the user that the format is not valid, and the Parcel ID value needs to be completed.

Parcel ID error message.

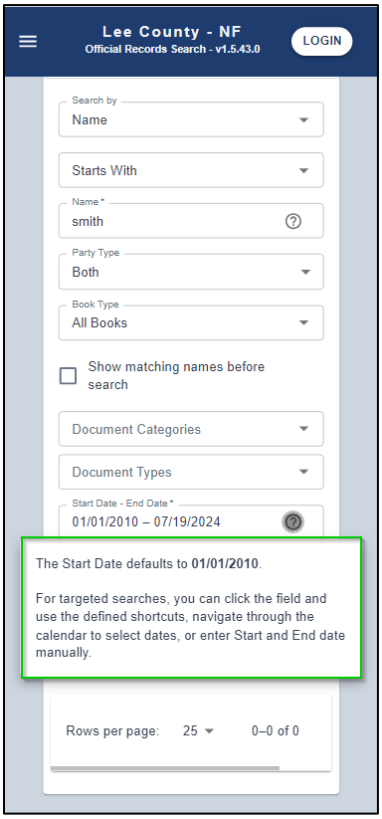

This document may contain confidential and/or proprietary information and is intended to be used only by licensed Landmark users. Any use by others is strictly prohibited.

LAN-1380: Search - Help Button from Date Range Not Displaying Help Text

Expected Result: The help text should be displayed when selecting the Help button from the Date Range input field, regardless of mobile device type.

Resolution: Fixed issue where the help text would not display when selecting the Help button from the Date Range input field on mobile devices. Now the text is displayed properly when selecting the Date Range help button.

LAN-1381: Fraud Alert - User not Able to Register Only Names for Monitoring

Expected Result: When a new Fraud Alert is created, the system should allow the user to configure what data is required. The system should allow the user to create Fraud Alert requiring only Name, or Name and Address, or Name, Address and Parcel ID, or Name and Parcel ID.

Resolution: Fixed issue where the Fraud Alert was created only when the user completes the name and address, now the system evaluates the settings value to identify what fields should be required to allow the user to create the Fraud Alert.

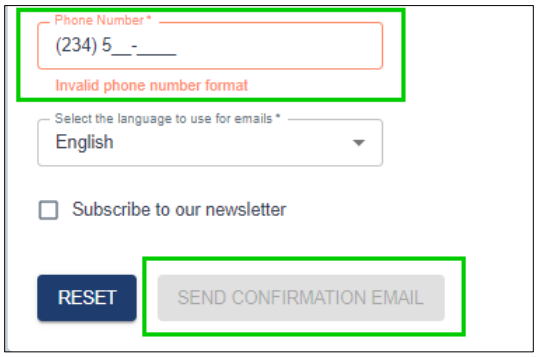

This document may contain confidential and/or proprietary information and is intended to be used only by licensed Landmark users. Any use by others is strictly prohibited.

LAN-1429: Send Confirmation Email Button is Enabled when Phone Number is not Filled

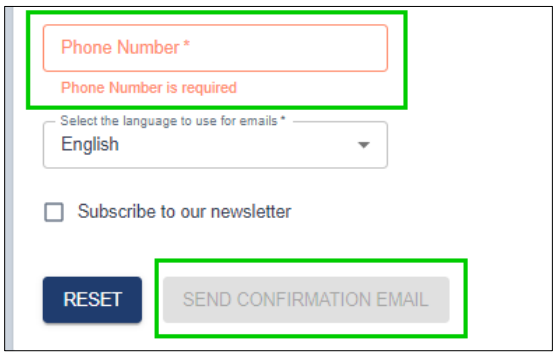

Expected Result: When the Phone Number field is available on Fraud Alert Registration Form and this is empty, Send Confirmation Email button should be disabled until the user completes the Phone Number following the specified format.

Resolution: Fixed issue where the Phone Number value was missed and the user was allowed to submit a Fraud Alert, now the system requires a Phone Number with a valid format.

Phone Number Format Alert.

Phone Number Required Alert.

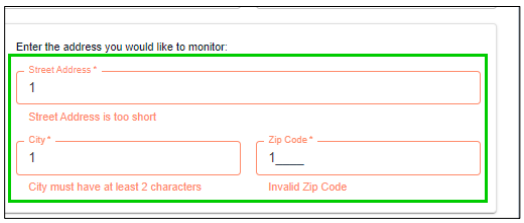

LAN-1434: City and Zip Code in Fraud Alert Registration Need Data Validations

Expected Result: When filling Street Address, City or Zip Code on Fraud Alert Registration form, data entered on those fields should be validated and fields should be defined as required.

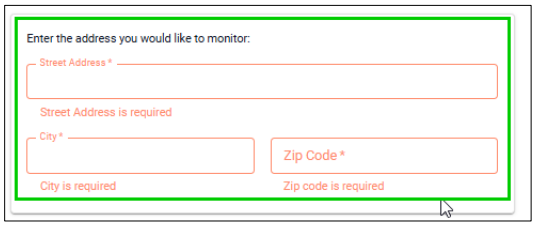

Resolution: Fixed issue where Street Address and City fields were allowing to save only blank spaces and the Zip Code field was allowing to save letters, now Street Address requires at least 5 valid characters, City requires at least 2 characters, and Zip Code allows only 5 numbers.

This document may contain confidential and/or proprietary information and is intended to be used only by licensed Landmark users. Any use by others is strictly prohibited.

Data Validations.

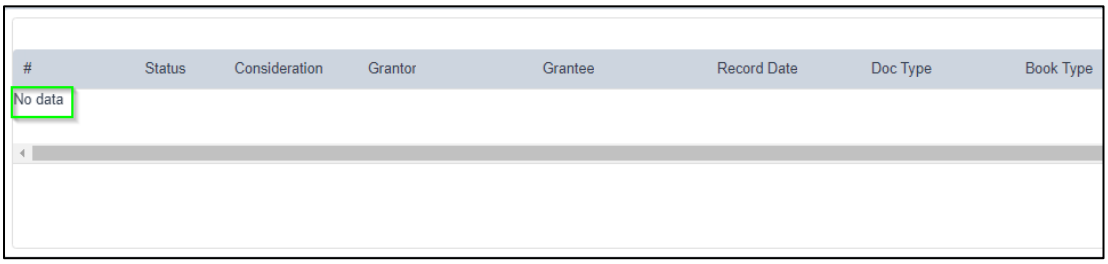

Required Field Validations.

LAN-1436: Search - No Search Results Displays Message with Typo

Expected Result: The message indicating that there are no results in the Search Results grid should be read without any typos.

Resolution: Fixed issue where the message indicating that there are no results in the Search Results grid would read: 'Now data' instead of 'No data'. Now the message reads without any typo:

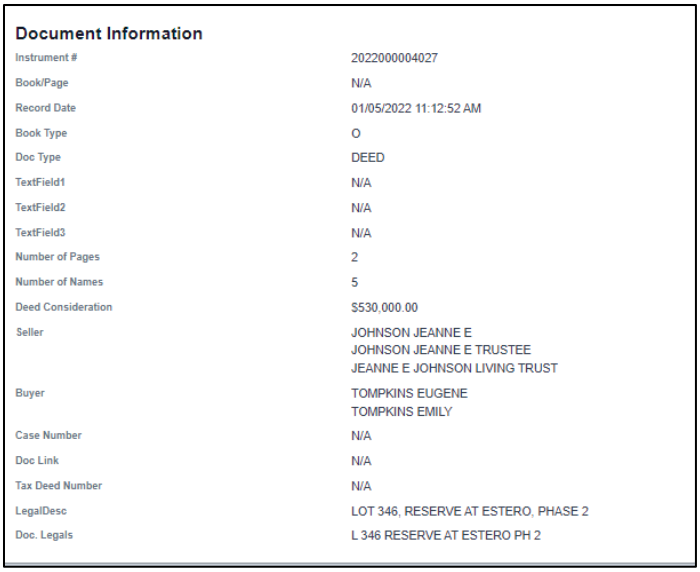

LAN-1476: Document Information Section Not Displayed for Some Documents

Expected Result: In the Search screen, when selecting a document from the Search Results grid, the related details should be displayed in the Document Details screen - Document Information section.

Resolution: Fixed issue where some documents would not show the related details in the Document Information section.

This document may contain confidential and/or proprietary information and is intended to be used only by licensed Landmark users. Any use by others is strictly prohibited.

LAN-1478: Parcel ID Field does not Validate Configured Format

Expected Result: When a partial value is filled in for Parcel ID field on Fraud Alert Registration form, an Alert Message should be displayed to advise users they need to complete the Parcel ID value following the configured format.

Resolution: Fixed issue where the Fraud Alert Registration form was allowing the user to create a new Fraud Alert without completing the Parcel ID value using the configured format, now the system displays and Alert Message about the issue and does not activate the Send Confirmation button until the user completes the Parcel ID value. This will apply to Personal and Business Fraud Alerts.

Fraud Alert Registration Form – Incomplete Parcel ID value.

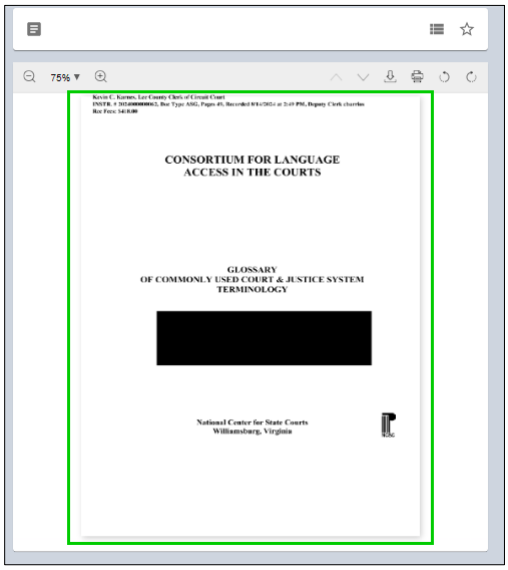

This document may contain confidential and/or proprietary information and is intended to be used only by licensed Landmark users. Any use by others is strictly prohibited.

LAN-1480: Document Image is Not Displayed

Expected Result: PDF Image should be displayed on Image Viewer when the user clicks over the selected item on the Search Results.

Resolution: Fixed issue where Missing PDF message was displayed due to malforming URL to get the PDF document, now the system displays the corresponding PDF Image.

Image PDF Viewer on Document Details.

This document may contain confidential and/or proprietary information and is intended to be used only by licensed Landmark users. Any use by others is strictly prohibited.

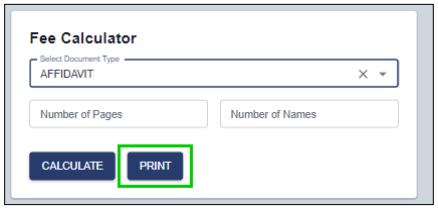

Added Features

LAN-1197: Fee Calculator Page – Print Button Functionality

Request Details: Add the ability to print fee calculation details, the Print button should be disable by default, when the user selects the document type, the Print button should be enabled.

Resolution: Added the ability to print upon pressing the Print button. The printed output now encompasses the fee calculation criteria, buttons, and detailed fee information.

Fee Calculation.

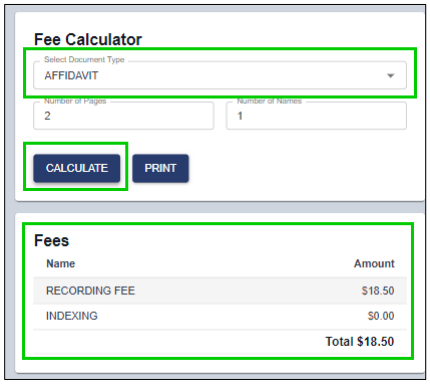

LAN-1198: Fee Calculator Page – Calculate Button Functionality

Request Details: Add the ability to calculate the fees for each document type selected, the Fees Calculation displayed should include the document type and the values into the corresponding entry fields.

Resolution: When the user selects the document type, the corresponding data entry fields are displayed to allow the user to enter the values. These values are used when the Calculate button is pressed and the Fees Calculation is displayed.

Fee Calculation.

This document may contain confidential and/or proprietary information and is intended to be used only by licensed Landmark users. Any use by others is strictly prohibited.

LAN-1199: Fee Calculator Page – Front-End Development and Styling

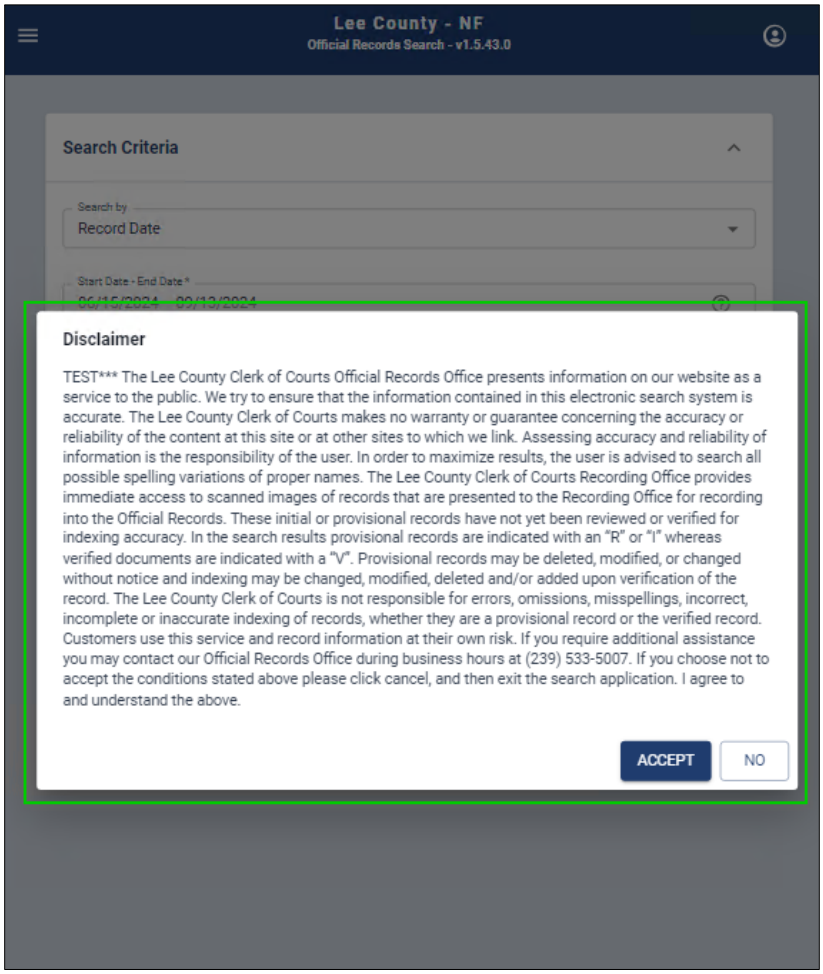

Request Details:1 The system should display the corresponding entry fields for each document type and the Calculate and Print buttons, the entry fields should receive the values used for fee calculation.

Resolution: Added the Calculate and Print buttons and the functionality to display the corresponding entry fields for the selected document type. The values in these input fields are used in the fee's calculation.

LAN-1211: Show Disclaimer Message when User Navigates to the Search Page

Request Details: Show disclaimer message when user attempts to perform a search.

Resolution: A disclaimer message will be displayed to the user when attempting to perform a search for the first time, if the disclaimer is not accepted, the user will not be able to perform a search.

This document may contain confidential and/or proprietary information and is intended to be used only by licensed Landmark users. Any use by others is strictly prohibited.

Release 1.5 Service Pack 42

Corrected Issues

LAN-1395: Incorrect Current Password Allows to Change Password Account

> ***Expected Result:*** When a user logged into the system selects to change password account, the system requires the user to enter the current password, this current password should be used to validate the credentials of the actual user.
>
> ***Resolution:*** Fixed issue where current password was required but was not validated to allow users to change their credentials. Now the system validates the current password and when the Change Password button is pressed a database validation occurs to allow or deny the password change.

Added Features

N/A

This document may contain confidential and/or proprietary information and is intended to be used only by licensed Landmark users. Any use by others is strictly prohibited.

Release 1.5 Service Pack 41

Corrected Issues

LAN-1388: First Name, Last Name and Zip Code Allow to Create an Account with Invalid Data

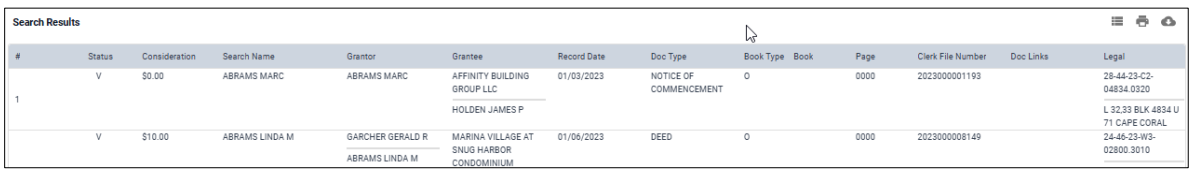

> ***Expected Result:*** When a new account is created the system should validate User Data entered using regular expressions to confirm it is valid information.
>
> ***Resolution:*** Fixed issue where the system was allowing to create accounts with invalid data on First Name, Last Name or Zip Code fields. Now the system requires for First and Last Name to be between 2 and 50 characters allowing special characters like hyphens and apostrophes, in addition, a validation was added to the Zip Code field allowing only digits with a maximum length of 5.

LAN-1411: Columns displayed on Quick Search for Mobile are different of Columns displayed on Quick Search for Web

> ***Expected Result:*** Search by "Quick Search" in Mobile for Small or Larger screen sizes should display the same columns as on the Web application.
>
> ***Resolution:*** Fixed issue where Doc Links column was not being displayed and Case Number column was displayed when Search by "Quick Search" was performed on Mobile, now Mobile application displays the same columns between different screen sizes.
>
> 768px Screen Sizes.

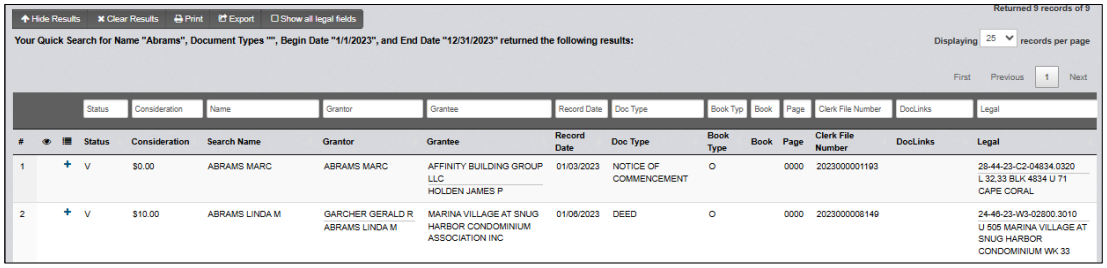

> Large Screen Sizes.

This document may contain confidential and/or proprietary information and is intended to be used only by licensed Landmark users. Any use by others is strictly prohibited.

Web Application.

LAN-1424: Search by Case Number Removes Case Number Field from Search Results after Viewing Document Detail

Expected Result: When a Search by Case Number is performed this should display Case Number column, this column should remain visible after user interacts with the document details.

Resolution: Fixed issue where the Case Number column was removed from the search results after users interacted with the document detail and returned to the search results, now the original columns are displayed with the corresponding information.

LAN-1426: Fraud Alert Registration Success Message Persists after Changing Fraud Alert Type or Clicking the Reset Button

Expected Result: When a new Fraud Alert is registered, a Fraud Alert Registration message should be displayed until the user interacts with the mouse or 10 seconds after the registration is submitted.

Resolution: Fixed issue where Fraud Alert Registration message was not removed after a successful fraud alert.

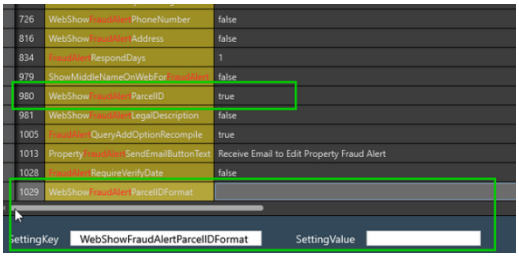

LAN-1433: Parcel ID Format is Cleared Out when Setting WebShowFraudAlertParcelIDFormat is Empty

Expected Results: When the setting **WebShowFraudAlertParcelID** is true and the setting **WebShowFraudAlertParcelIDFormat** has no value (Empty), the user should be allowed to create a new Fraud Alert with a Parcel ID filled with a value without a specific format.

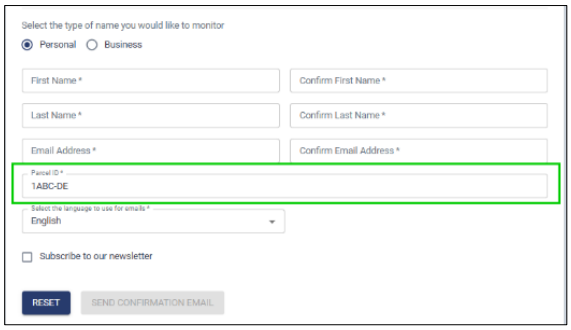

Resolution: Fixed issue where the user filling the Parcel ID with a value without format and moving to the next field, the system was clearing the entered value, now since there is no required format the Fraud Alert is created, and the entered Parcel ID is saved on the database.

WebShowFraudAlertParcelIDFormat setting on Landmark Client.

This document may contain confidential and/or proprietary information and is intended to be used only by licensed Landmark users. Any use by others is strictly prohibited.

Fraud Alert Registration Form on Application.

This document may contain confidential and/or proprietary information and is intended to be used only by licensed Landmark users. Any use by others is strictly prohibited.

Added Features

N/A

This document may contain confidential and/or proprietary information and is intended to be used only by licensed Landmark users. Any use by others is strictly prohibited.

Release 1.5 Service Pack 40

Corrected Issues

LAN-1401: Clear Filters – Document Types and Date Fields are not Reverted to their Initial Values

Expected Result: When a search is performed the button Clear Filters should be enabled to allow the user to clear filter fields and restore the filters to their default values.

Resolution: Fixed issue where the Clear Filters button was not enabled after performing a search on different search options, now the Clear Filters button is enabled when search is completed, and when the button is pressed filter fields are restored to their default values.

LAN-1404: Search by Document Type is not Filtering by the Document Type Selected

Expected Result: When a new Search by Document Type is performed, search results should include only documents that correspond with the Document Type selected on the filters.

Resolution: Fixed issue where Search by Document Type was not honoring Document Type filter on search results, now the query observes the Document Type to include the corresponding type selected on the filter parameters.

LAN-1405: Document Type is not Identified as Mandatory

Expected Result: When a new Search by Document Type is submitted without selecting a Document Type, the "Required" alert should be displayed.

Resolution: Fixed issue where a Document Type search was allowed without a Document Type selected, now Document Types field is marked as required and the Search button displays the Required alert when this field is missed.

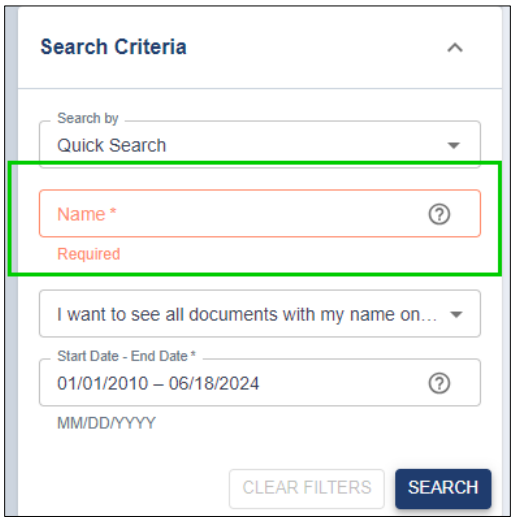

LAN-1406: Name Label has a Mandatory Symbol (*) Missed on Search by "Quick Search"

Expected Result: In Search by "Quick Search" screen, the Name field should have an asterisk (*) to indicate it is a required field, also the Required alert should be displayed when a search is submitted without this field value.

This document may contain confidential and/or proprietary information and is intended to be used only by licensed Landmark users. Any use by others is strictly prohibited.

Resolution: Fixed issue where the required indication on Name label was missing and the Required alert was called, now Name label is marked as required field and Required alert is displayed when a search is performed without a value on this field.

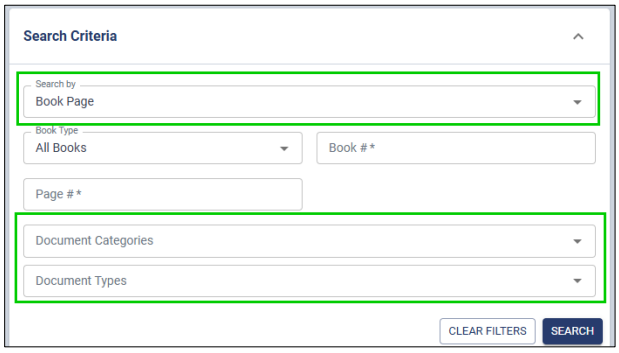

LAN-1409: Different Search Fields Displayed Between Mobile and Web

Expected Result: When the user selects Search by "Book Page" or "Clerk File Number" filters should display Document Categories and Document Types but should not display Date Range, in addition Search by "Quick Search" Date Range filter should be displayed but Document Types and Document Categories should be removed as filters.

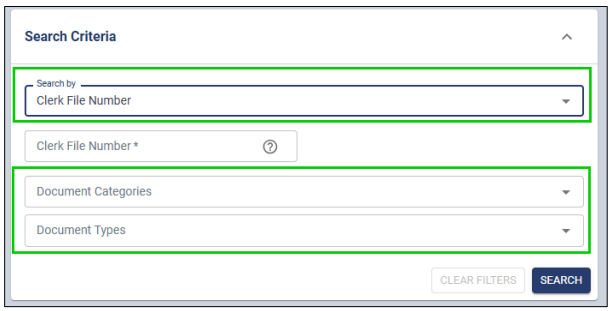

Resolution: Fixed issue where Search by "Book Page" or "Clerk File Number" were displaying Date Range filter, this is now removed, in addition, in Search by "Quick Search" the Document Categories filter was removed.

Search by "Book Page"

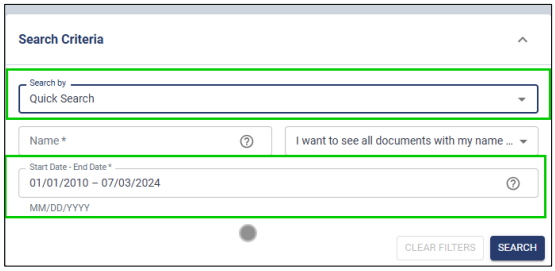

This document may contain confidential and/or proprietary information and is intended to be used only by licensed Landmark users. Any use by others is strictly prohibited.

Search by “Clerk File Number”

Search by “Quick Search”

LAN-1410: Selected Values are not Cleared Out when Clear Filters Button is Pressed

Expected Result: Clear Filters button should remove all values selected by the user and restore default values in the fields. The default value for Date Range field is 01/01/2010 to the present day.

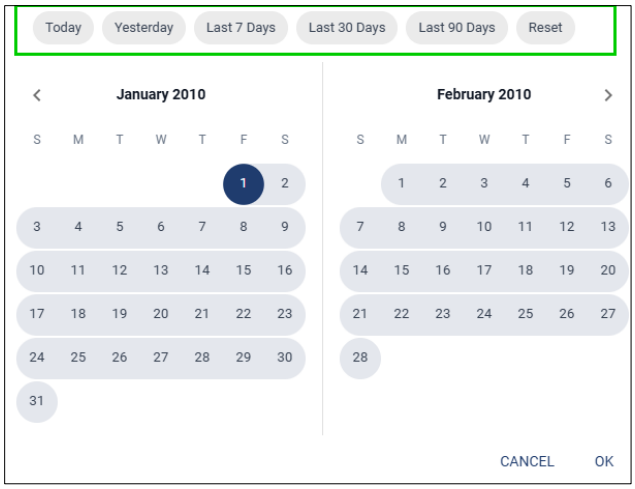

Resolution: Fixed issue where the Clear Filters button was not removing document type, document categories, and date range values, now Document Types and Document Categories fields are cleared out and the Date Range field is reset to default value.

LAN-1446: Date Range Options are Displayed as a List Above the Calendar on Larger Screen Size Devices (Laptop)

Expected Result: In the Search page, when clicking on Date field, the Calendar should be opened listing default date range options in a row.

Resolution: Fixed issue where default date range options were displayed as a vertical list above the Calendar, now default date range options are displayed in a row; the calendar will display 2 consecutive months.

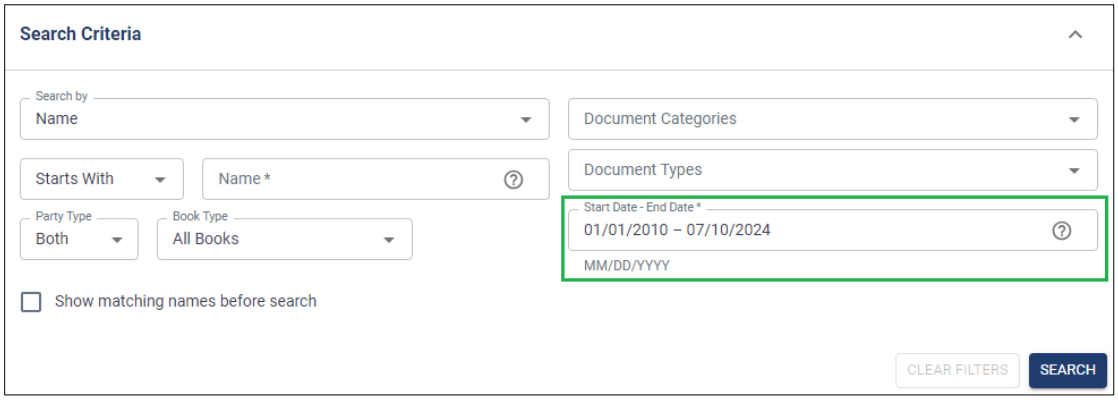

This document may contain confidential and/or proprietary information and is intended to be used only by licensed Landmark users. Any use by others is strictly prohibited.

LAN-1448: Date Field is not Rendered Complete for all Search by on Larger Screen Size (Laptop)

Expected Result: When selecting a search option available on Search by, Date Range field should display a default Start and End Value, for those Search by options with Date filter defined.

Resolution: Fixed issue where Date Range field was not displaying Start and End values correctly when the application was opened on larger screens sizes, now Date Range field is completely rendered.

This document may contain confidential and/or proprietary information and is intended to be used only by licensed Landmark users. Any use by others is strictly prohibited.

Added Features

N/A

This document may contain confidential and/or proprietary information and is intended to be used only by licensed Landmark users. Any use by others is strictly prohibited.

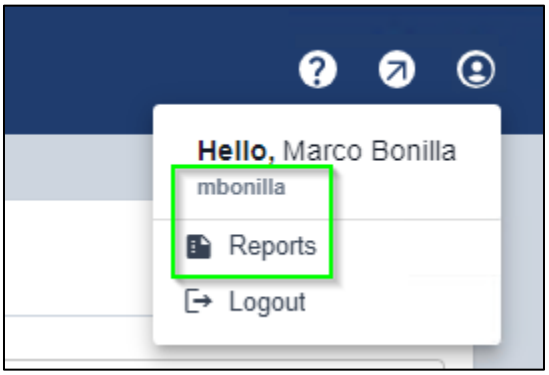

Release 1.5 Service Pack 39

Corrected Issues

LAN-1385: Login - Admin Role Not Able to Login

Expected Result: Administrator role users should be able to log in to the system.

Resolution: Fixed issue where Administrator role users would not be able to log into the system. Administrator role users will not have access to the My Account screen, instead they will have access to the Reports screen (currently under development).

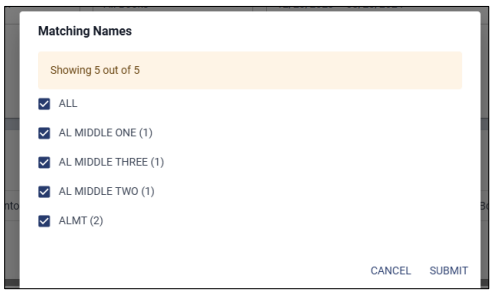

LAN-1400: Show Matching Names Before Search on Search by Name

Expected Result: When a new Search by Name is performed there is the checkbox labeled "Show matching names before search", if this is selected, a pop-up window with the Names that meet the search criteria should be displayed.

Resolution: Fixed issue where the option "Show matching names before search" was not displaying data, now Names that meet the search criteria are displayed in a pop-up window when the option is selected.

Matching Names pop-up window.

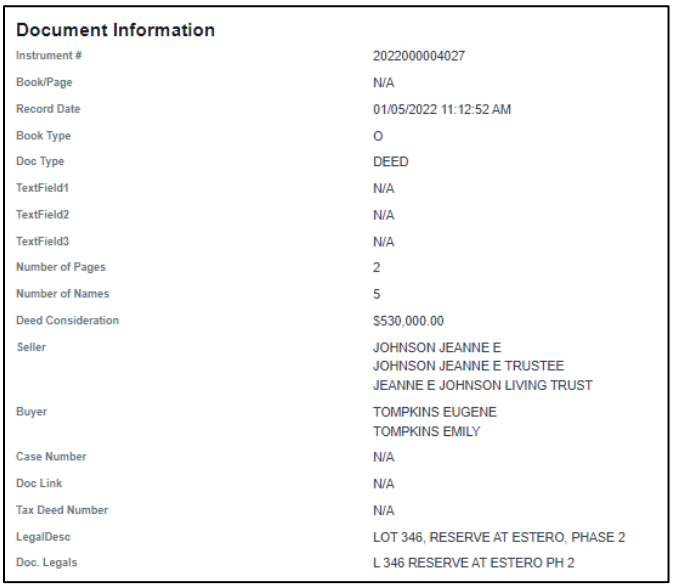

This document may contain confidential and/or proprietary information and is intended to be used only by licensed Landmark users. Any use by others is strictly prohibited.

LAN-1412: Document Information Section Displays "N/A" Instead of Actual Values

Expected Result: In the Search screen, when selecting a document from the Search Results grid, all the actual values should be displayed in the Document Details screen - Document Information section.

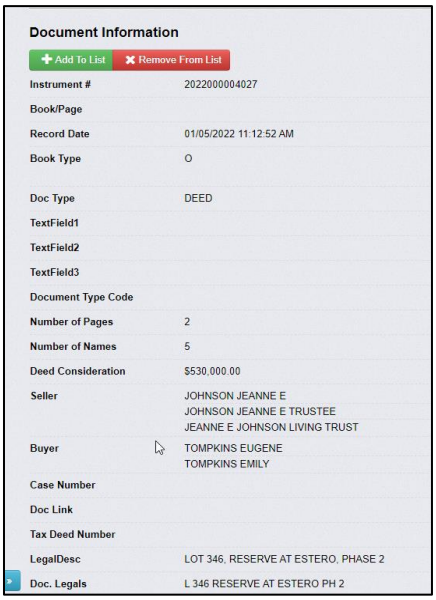

Resolution: Fixed where some documents would not show the actual values for some fields in the related details in the Document Information section. Now the actual values are displayed for all the fields, matching the values displayed on the web application.

This document may contain confidential and/or proprietary information and is intended to be used only by licensed Landmark users. Any use by others is strictly prohibited.

LAN-1413: Document Details Label Fields on Mobile Application Mismatch Against Web Application

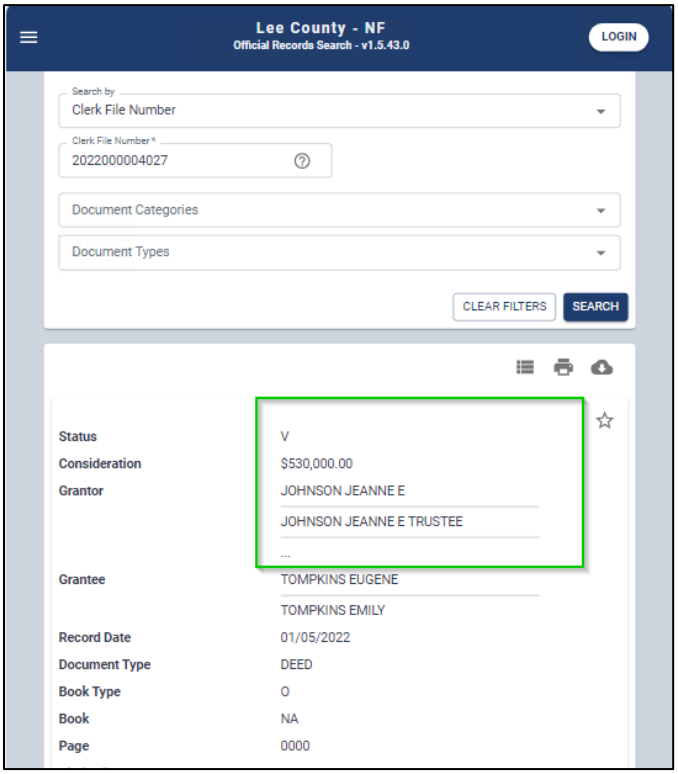

Expected Result: Document Details fields displayed for any document should have the same labels between Mobile and Web application.

Resolution: Fixed issue where Document Details fields were not displaying the same labels, now labels are the same between applications.

LAN-1415: Search - List Mode Search Results View Ignores Margins when Text is Too Long

Expected Result: List mode Search Results should respect the margins when the text is too long.

Resolution: Fixed issue where the list mode Search Results would not respect the margins when text was too long. Now data is displayed respecting the margins.

LAN-1416: Search Results Summary Ignores Web Setting MaxNumberDirectOrIndirectNames

Expected Result: When a document has many Direct or Indirect Names, search results should display only the quantity of names that meets the setting **MaxNumberDirectOrIndirectNames** value.

Resolution: Fixed issue where **MaxNumberDirectOrIndirectNames** was not being honored, now quantity of names is displayed according to the value set.

This document may contain confidential and/or proprietary information and is intended to be used only by licensed Landmark users. Any use by others is strictly prohibited.

Landmark Desktop -> Administration -> Settings -> MaxNumberDirectOrIndirectNames.

Id	SettingKey	SettingValue
351	MaxNumberDirectOrIndirectNames	2

LAN-1420: Columns on Search by Clerk File Number and Book Page for Mobile are Different from Columns Displayed on the Web

Expected Result: When a new Search by Clerk File Number or Search by Book Page is performed the columns displayed should be equal on Mobile and Web application.

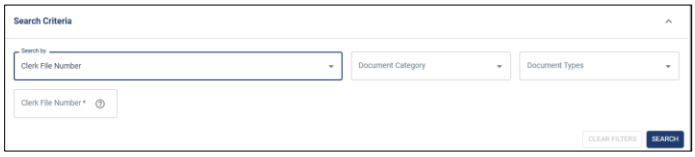

Resolution: Fixed issue where Case Number and Search Name columns were displayed on Search Results in Search by Clerk File Number and Book Page, and Doc Links column was missed. Now, Search Results by any of those search types do not display Search Name and Case Number columns and displays the Doc Links column.

LAN-1421: Date Range Field is Displayed on Search by Clerk File Number and on Search by Book Page

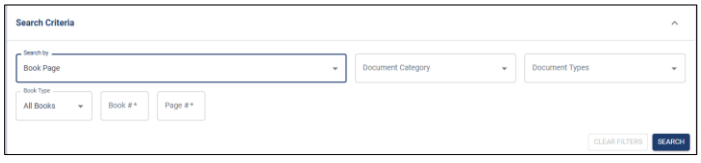

Expected Result: When a Search by Clerk File Number or Search by Book Page is selected, Date Range field should not be available as Search Parameter.

Resolution: Fixed issue where Date Range field was displayed on Search by Clerk File Number and on Search by Book Page, now Date Range field is not visible as Search Parameter. In the backend a date is required by the API, by default the query is using value 01/01/0001 to not affect the results.

Search by Clerk File Number

Search by Book Page

LAN-1428: SubscribeEmail Field on Table FraudAlert Always Save Value of 1

Expected Result: When a new Fraud Alert is registered with “Subscribe to our newsletter” checkbox uncheck, database should store on SubscribeEmail field value of 0, when a new Fraud

This document may contain confidential and/or proprietary information and is intended to be used only by licensed Landmark users. Any use by others is strictly prohibited.

Alert is registered with “Subscribe to our newsletter” checkbox checked, database should store on SubscribeEmail field value of 1.

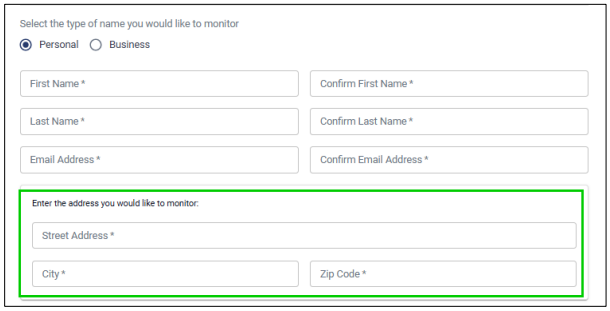

Resolution: Fixed issue where SubscribeEmail field was saving always value of 1 without honoring the value of “Subscribe to our newsletter” checkbox, now is storing the value according to the checkbox marked or not.

LAN-1432: Fields on Table FraudAlert does not Save the Value Entered on Fraud Alert Registration Form

Expected Result: When the Street Address, City and Zip Code values are filled in for a new Personal or Business Fraud Alert, all data entered by the user in the form should be saved to the FraudAlert table in the database. Each field on the Fraud Alert Registration Form should be saved to the corresponding database field.

Resolution: Fixed issue where Address1 field in the table FraudAlert was not saving the Street Address value filled by the user in the Fraud Alert Registration Form. Now each value filled on the Fraud Alert Registration Form is saved in the corresponding database field, Street Address = FraudAlert.Address1, City = FraudAlert.City, and Zip Code = FraudAlert.Zip.

Fraud Alert Registration Form

LAN-1442: Data Columns on Mobile Application are different from Data Columns on the Web

Expected Result: When a Search by “Legal” or “Advance Legal” is performed, search results should display the following data columns: Status, Consideration, Grantor, Grantee, Record Date, Doc Type, Book Type, Book, Page, Clerk File Number, Doc Links, and Legal.

Resolution: Fixed issue where a Search by “Legal” or “Advance Legal” was displaying on search results Search Name and Case # columns, those columns were removed, and Doc Links column is now displayed.

This document may contain confidential and/or proprietary information and is intended to be used only by licensed Landmark users. Any use by others is strictly prohibited.

Search results data columns displayed when a Search by Legal or Advance Legal is performed.

LAN-1450: Column 'Search Name' is Added to Search Results after Viewing Document Details

Expected Result: Search by Document Type, Book Page, Clerk File Number, Legal, Record Date or Advance Legal should not display Search Name column.

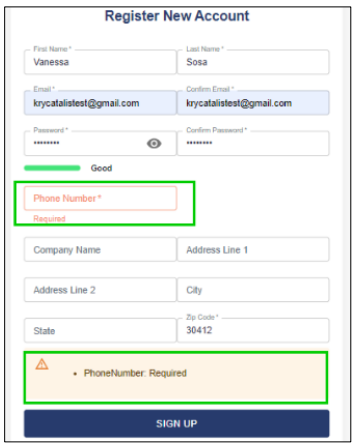

Resolution: Fixed issue where the Search Name column was added after a search or after opening the Documents Detail page, now only Status, Consideration, Grantor, Grantee, Record Date, Doc Type, Book Type, Book, Page, Clerk File Number, Doc Links, and Legal columns are displayed.

LAN-1451: Phone Number Required Alert is Missed on Account Registration Page

Expected Result: When a new account is being created, First Name, Last Name, Email, Confirm Email, Password, Confirm Password, Phone Number and Zip Code should display the required message.

Resolution: Fixed issue where Phone Number was not marked as required and when that information was missing an incorrect error message was displayed. Now when a Phone number is not entered corresponding required message is displayed.

Phone Number required alert.

Added Features

LAN-1312: Update .Net Framework to 4.8

> ***Request Details***: Update .Net Framework to 4.8.
>
> ***Resolution***: Updated .Net Framework to 4.8. A smoke testing was performed to validate basic functionality after the update.

This document may contain confidential and/or proprietary information and is intended to be used only by licensed Landmark users. Any use by others is strictly prohibited.

Release 1.5 Service Pack 37

Corrected Issues

LAN-1372: Login - "Forgot Password?" Clickable Area Outside Element

Expected Result: In the Login screen, only the “Forgot Password?” link should be clickable, the blank area around it should not be clickable.

Resolution: Fixed issue where the area around the link “Forgot Password?” was also clickable and the user was redirected to the Forgot Password page.

Forgot Password blank area.

Forgot Password link.

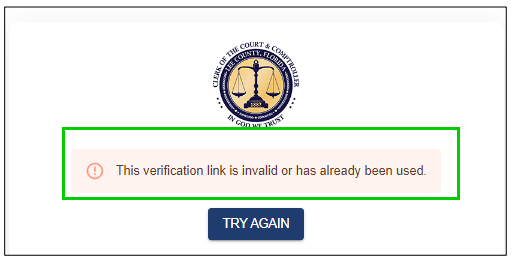

LAN-1377: Register - Invalid Authentication Link Error Message

Expected Result: Appropriate error message should be displayed when the user tries to use same authentication link more than once or when the authentication link is invalid.

Resolution: Fixed issue where the system was displaying “There was an error activating your account. Please try again or contact support” when authentication link is invalid or has been already used, a new error message will be displayed “This verification link is invalid or has already been used”.

Appropriate Authentication link error message.

This document may contain confidential and/or proprietary information and is intended to be used only by licensed Landmark users. Any use by others is strictly prohibited.

LAN-1379: Search - Name Input Shows Required when User Navigates Away from Search

Expected Result: The Name input field from the Search screen should not display is required when the user does not want to search for any document and navigates away from that search type.

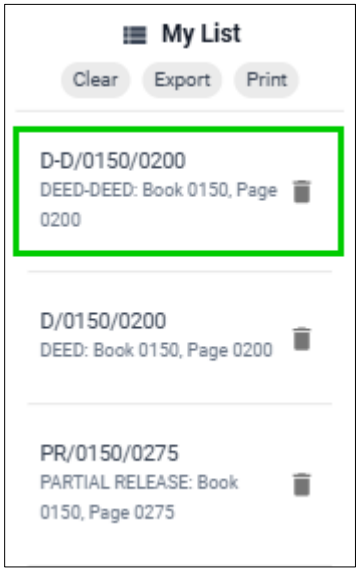

Resolution: Fixed issue where the Name input field would display it is required when navigating away from the Search screen.

LAN-1398: Document Information of Item Added to My List is Shown as Undefined

Expected Result: My List View should display the value of the following document properties: Document Type, Book Number and Page Number for each document added to it.

Resolution: Fixed issue where My List View was displaying Undefined for each document property, now the corresponding values of each property are available.

My List View.

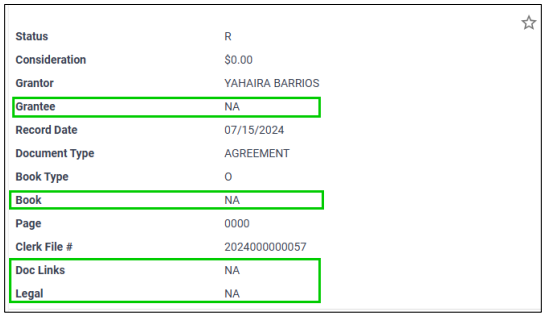

LAN-1422: Empty Data Column Value Results in Misalignment of Subsequent Data Columns

Expected Result: Columns with no data should display 'NA' value, this value should have the same alignment as other data value fields.

Resolution: Fixed issue where the system was displaying a blank space and subsequent data columns were losing alignment, now all data columns are left aligned, and the value 'NA' is displayed when there is no data in the corresponding column.

This document may contain confidential and/or proprietary information and is intended to be used only by licensed Landmark users. Any use by others is strictly prohibited.

Data columns with value NA.

This document may contain confidential and/or proprietary information and is intended to be used only by licensed Landmark users. Any use by others is strictly prohibited.

Release 1.5 Service Pack 36

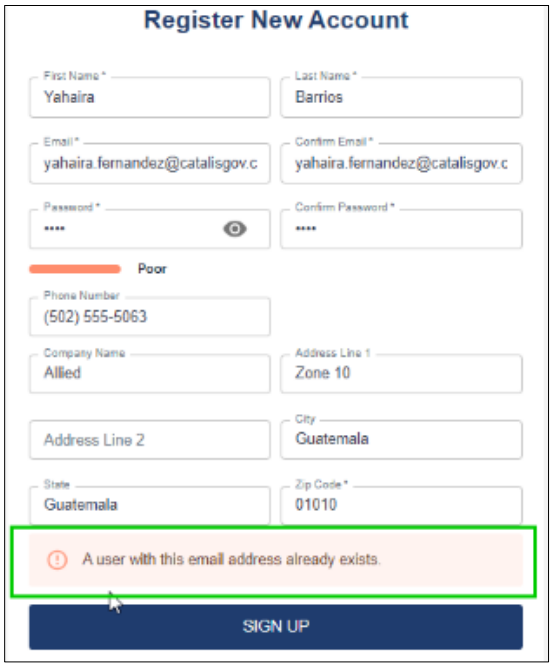

Corrected Issues

LAN-1363: Missing Middle Name Field on Personal Fraud Alert Form

> ***Expected Result*:** The Middle Name field should be visible on the Personal Fraud Alert form when the **ShowMiddleNameOnWebForFraudAlert** setting is true.
>
> ***Resolution*:** Fixed issue where Middle Name field was not displayed when the setting **ShowMiddleNameOnWebForFraudAlert** was set to true and the error message "An error occurred while processing your request" was displayed. Now Middle Name field is honoring the setting value.

LAN-1365: Web Mobile Application Allows to Register Using Duplicated Emails

> ***Expected Result:*** When the user tries to use an email address already associated to an account, the system should not allow the registration and should let the user know the email address is already associated to one account.
>
> ***Resolution:*** Fixed issue where the system was allowing the user to create a new account using an email address already associated with another account, now the system validates that the email address filled on the new account form is not registered before to allow new account creation.
>
> Alert message displayed.

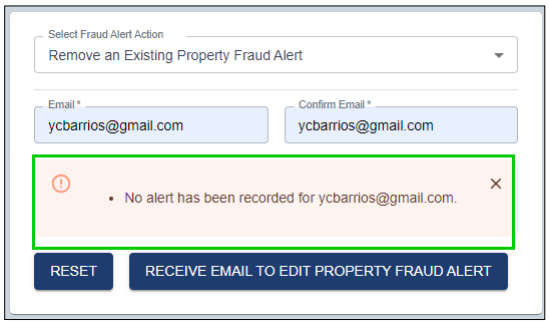

This document may contain confidential and/or proprietary information and is intended to be used only by licensed Landmark users. Any use by others is strictly prohibited.

LAN-1370: Message Error Unclear when User Tries to Unregister Fraud Alert from an Email without Fraud Alert Associated

Expected Result: Removing a Fraud Alert using a valid email address with no associated Fraud Alerts, the system should advise the user that the entered email address does not have a Fraud Alert associated.

Resolution: Fixed issue where the message "An error occurred while processing your request" was displayed removing a Fraud Alert using an email address with no associated Fraud Alerts, a new message will be displayed "No alert has been recorded for xxx@email.com".

Alert Message displayed.

LAN-1371: Fields are not Cleared after Unregister Property Fraud Alert Submission

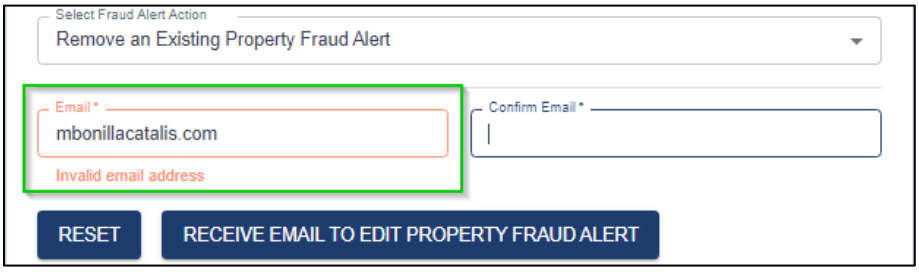

Expected Result: When the user Press "Receive Email to Edit Property Fraud Alert" button to submit a Fraud Alert removal, data filled on Email and Confirm Email fields should be cleared out.

Resolution: Fixed issue where the fields Email and Confirm Email were not cleared out after pressing the button "Receive Email to Edit Property Fraud Alert", now the fields are cleared out after the user perform the removal action.

LAN-1383: Fraud Alert – Remove Fraud Alert Section Allows Invalid Email Input Format

Expected Result: Email Address field in the Remove an Existing Fraud Alert section should not allow entering an invalid email format.

Resolution: Fixed issue where the Email Address field in the Remove an Existing Fraud Alert section would allow to enter an invalid email format. Now the email format is validated.

This document may contain confidential and/or proprietary information and is intended to be used only by licensed Landmark users. Any use by others is strictly prohibited.

LAN-1418: Parcel ID Format is not Evaluated Correctly

Expected Result: When ParcelID has a configured format for the Fraud Alert, the user should be able to create the Fraud Alert after completing the field value honoring the defined format.

Resolution: Fixed issue where the Fraud Alert registration form did not allow the user to create a new Fraud Alert following the ParcelID configured format, now the system honors the corresponding ParcelID format to allow the user to create a new Fraud Alert.

Added Features

LAN-1177: Implement Responsive Document Details Page

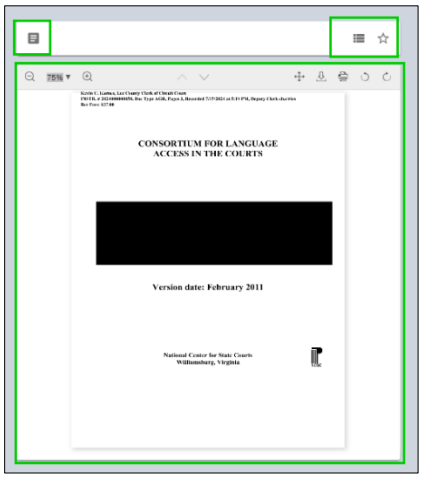

Request Details: Add the ability to view the Document Details information and the PDF associated with that document. For large screen size devices this implementation should be done dividing the screen into 2 horizontal sections. For small screen size devices, full width should be used to display the associated PDF, and a View Document Details button should be visible. Implementation should include a container with the options View List, Add to List / Remove from List.

Resolution: Added the ability to view Document Details information for all size devices. In the implementation for large screen size devices, the screen is divided into 2 horizontal sections. The left section takes up 70% of the screen and displays the associated PDF document, the right section takes up 30% of the screen and displays the document information. In the implementation for small screen size devices, the entire screen displays the associated PDF document, to view the details there is unlabeled button available on the container at the left of the screen, when the user presses this button, a modal window containing document information is displayed. View List and Star icons are also displayed in the container.

Large Screen size devices.

Small Screen size devices.

LAN-1178: Document Details Page – Add to List and Remove from List

Request Details: Add the ability to add or remove items from My List.

Resolution: Added the ability to add or remove items from My List. In the Documents Details page, the user can add items to My List by clicking the Start icon. When a document is added to the list the Star icon is filled in. When the Star icon is filled, and the user clicks on it, the document is removed from My List.

Star icon displayed when the document is not added to My List.

Star icon displayed when the document is added to My List.

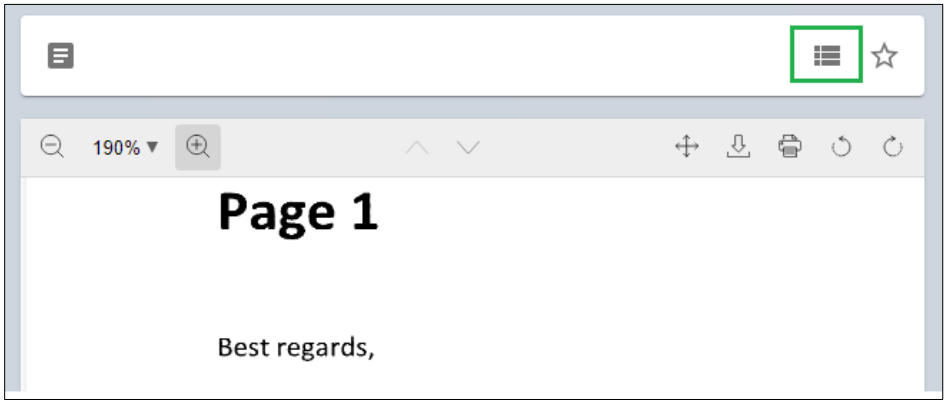

LAN-1179: Document Details Page - Add View My List Icon

Request Details: Add My List icon to the document details page, this icon should allow users to see items added to My List and remove items from there.

Resolution: Added My List icon to the document details page to allow users see items previously added to My List. My List icon will allow the user to see and remove items from My List when navigating the document details page.

My List icon is available on the document details page.

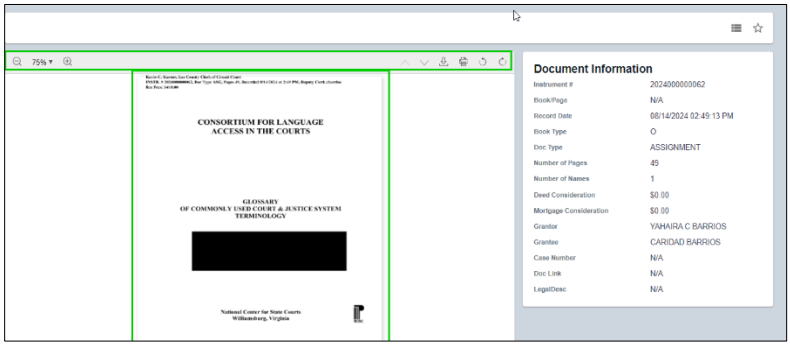

This document may contain confidential and/or proprietary information and is intended to be used only by licensed Landmark users. Any use by others is strictly prohibited.

LAN-1180: Document Details Page – PDF Viewer Section

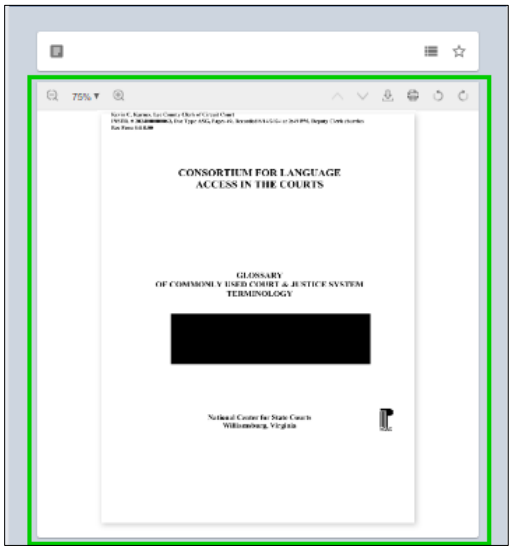

Request Details: Add a PDF Viewer to the Document Details page, this PDF Viewer should include a PDF Toolbar that allows the user to zoom in and out, go next and previous page, print current page, download current page and rotate PDF document, additionally PDF Viewer area should resize according to the screen device size used. PDF Viewer should work in coordination with the user's rights to see the PDF document.

Resolution: Added the ability to view the PDF image on Documents Details page when allowed for the logged in user, if the user's rights do not allow viewing the document, an informational stamp will be displayed in the Image Viewer. The PDF Viewer allows the user to zoom in and out the document image, move through the document when has more than one page, print the current page, download the current page, rotate clockwise and rotate counterclockwise.

PDF Viewer on Large Screen Size Devices.

PDF Viewer on Small Screen Size Devices.

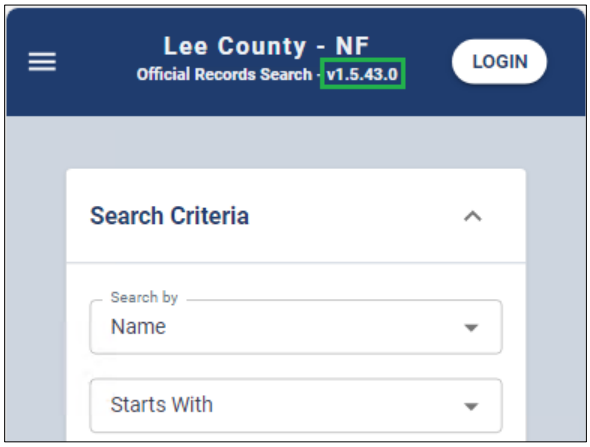

This document may contain confidential and/or proprietary information and is intended to be used only by licensed Landmark users. Any use by others is strictly prohibited.

LAN-1245: Display Web Mobile Version

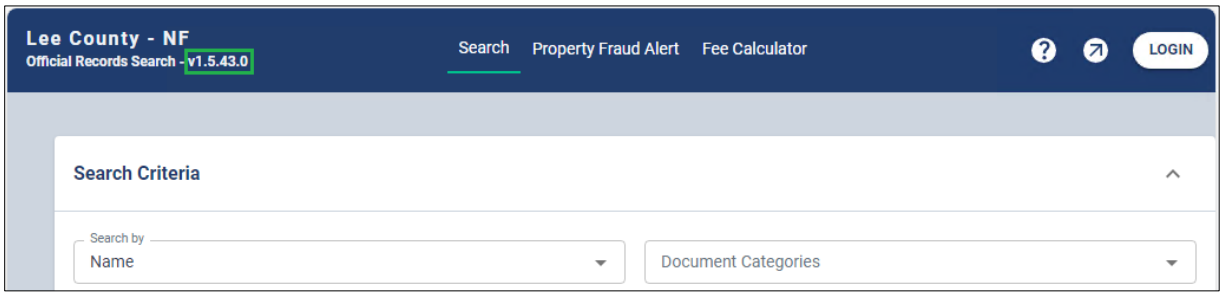

Request Details: Add mobile version number for small and large screen size devices.

Resolution: Added the version number next to the application name.

Small screen size devices.

Large screen size devices.

This document may contain confidential and/or proprietary information and is intended to be used only by licensed Landmark users. Any use by others is strictly prohibited.

This document may contain confidential and/or proprietary information and is intended to be used only by licensed Landmark users. Any use by others is strictly prohibited.

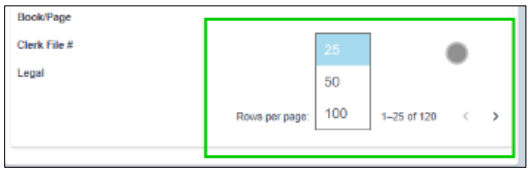

Added Features

LAN-1170: Search Page - Add Pagination to Footer

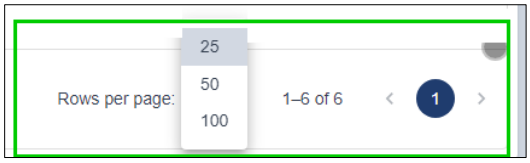

Request Details: Add pagination controls visible and functional in the footer. Using the pagination controls users could navigate through the table with the options to go to the next page and to the previous page. The number of "Rows per page" should be a drop-down to list options 25, 50, and 100 and the number of rows in the page should be clearly displayed.

Resolution: Added the ability to move between pages in the Search Results grid. For all screen sizes, rows per page options 25, 50, and 100 are available for selection and the user can move between pages with the next and back controls. Additionally, for tablet screens pagination numbers are available.

Pagination on screen sizes equal or less than 768px wide.

Pagination on screen sizes 768px wide and larger.

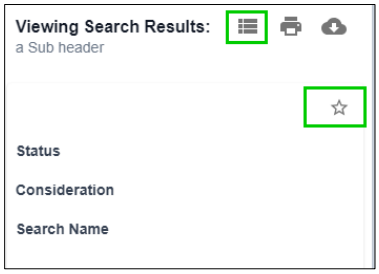

LAN-1171: Responsive List View with Add/Remove My List Feature

Request Details: In a List view for tablets and smaller devices, each data row should have a Star icon at the top of the right-hand side, the user should be able to add the document to "My List" by clicking the icon. Changes should be reflected immediately without needing to refresh the page.

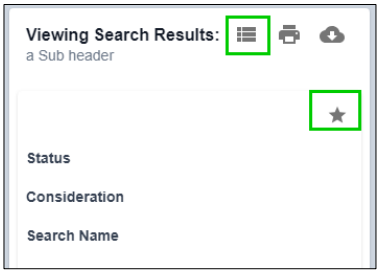

Resolution: Added the ability to Add or Remove items from My List. This ability is defined by the Star icon added to each data row on the List view. By default, the Star icon is not filled in, the user can click the icon, and the document will be added to My List, the icon will now be filled in, if the user clicks the icon a second time, this will remove the document from My List.

This document may contain confidential and/or proprietary information and is intended to be used only by licensed Landmark users. Any use by others is strictly prohibited.

Document not Added to My List

Document Added to My List

LAN-1367: Footer Pagination Controls for Larger Screen Sizes (Laptops and Desktops)

Request Details: Implement Pagination Controls that should be integrated into the table footer, these controls should provide the user with the ability to move through the table data page by page.

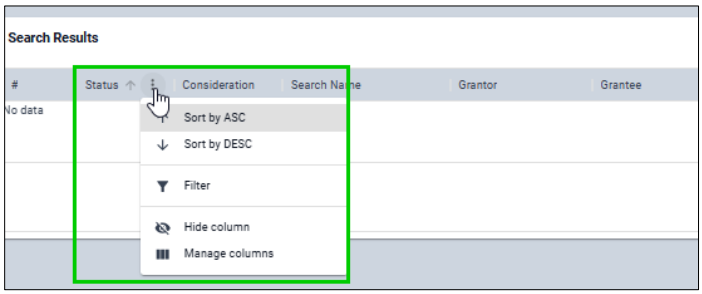

Resolution: Added the ability to move between pages in the Search Results grid, users could see a list of Page Numbers and move between pages with the next and back controls. Quantity of Page Numbers will depend on Rows per page selected. The Rows per page drop-down list will have these options 25, 50, and 100.

LAN-1368: Enable Column Filtering and Sorting Capabilities in the Search Page Table

Request Details: Add the functionality to sort and filter for each column displayed on the Search Results table, column sorting should allow users to sort data on Ascending or Descending mode, column filtering should allow users to filter values using the following operators: “contains”, “starts with”, “ends with”, “equal”, “is empty”, “is not empty”, and “is any of”. This feature implementation should be specifically designed for larger screen sizes. All data displayed on the Search Results table is processed as text.

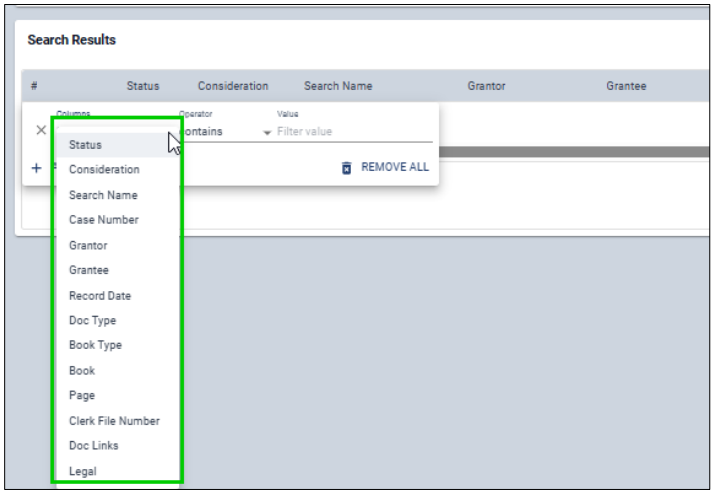

Resolution: Added the ability to filter and sort each column displayed in the Search Results table using the options listed when the user clicks the 3 dots icon on the column header or by pressing “Ctrl+Enter” over the column header selected. The filter operators listed on each column are the same. The Consideration column is treated as text and includes the $ as the first character. The Legal column filter using operator “start with” or “equal” are not implemented.

Column Header Options.

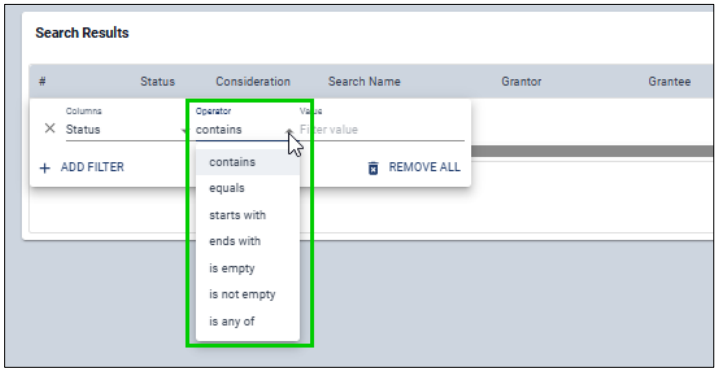

This document may contain confidential and/or proprietary information and is intended to be used only by licensed Landmark users. Any use by others is strictly prohibited.

Added Features

LAN-1204: My Account Page – Personal Details Tab

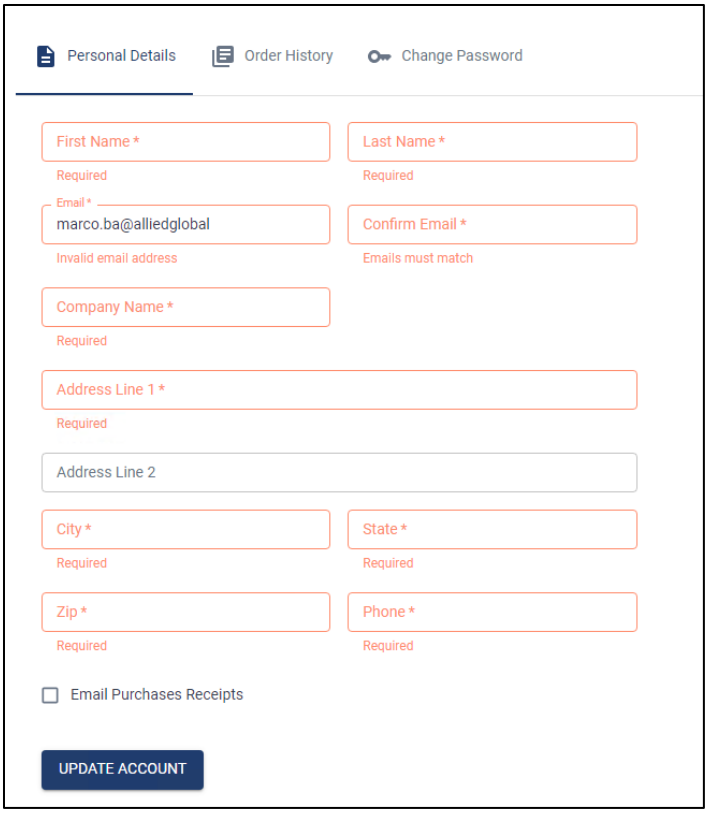

Request Details: Ensure users can view and update their accounts personal details efficiently. This includes validating user inputs, displaying appropriate success and error messages, and handling the email change process, specifically when a user attempts to change their email to one that is already in use.

Resolution: Added the Personal Details tab to My Account Page. In this screen, users can view and update their accounts personal details efficiently by entering the data they want to update and clicking on the Update Account button:

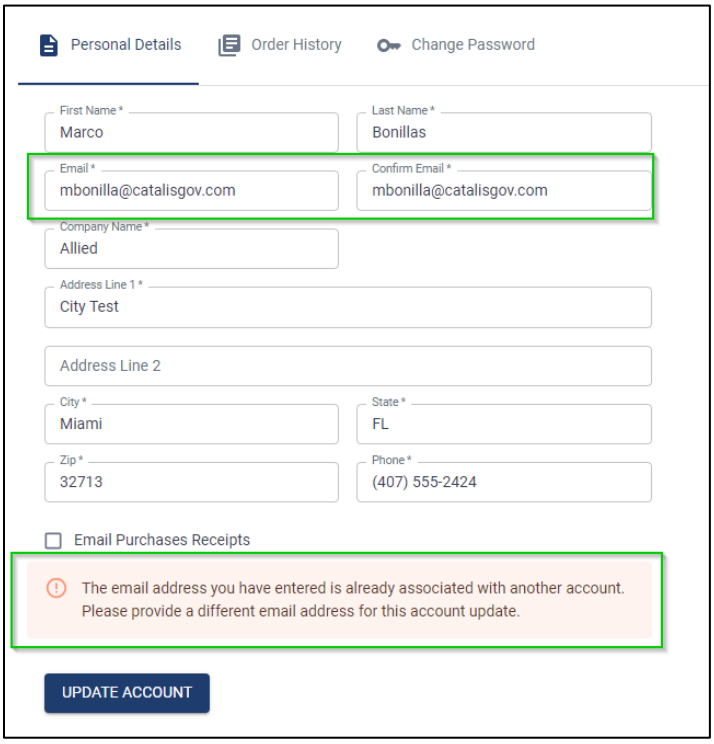

Implemented validation checks to ensure all required fields are filled and validate the standard format input for fields like email. Added validation to verify the new password and confirm password fields match:

This document may contain confidential and/or proprietary information and is intended to be used only by licensed Landmark users. Any use by others is strictly prohibited.

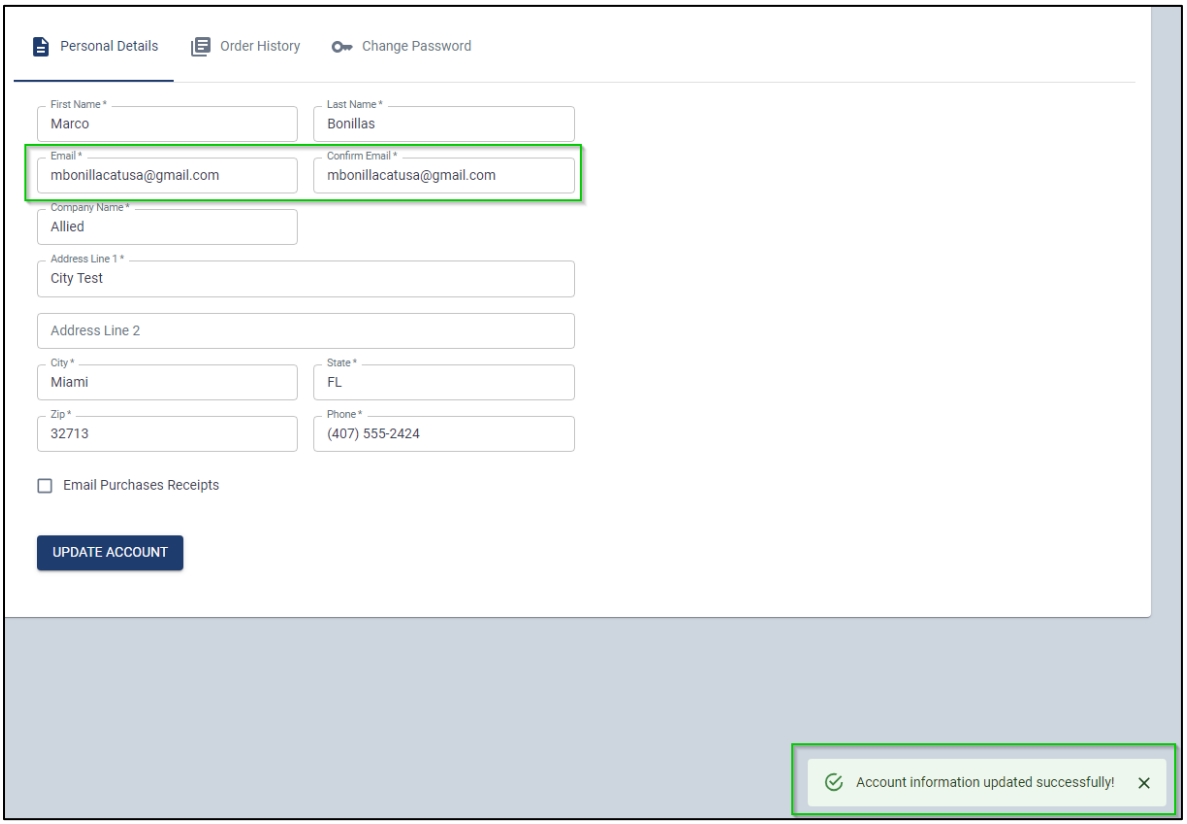

Implemented notifications to inform the user of the success or failure of their personal details update. Failed attempt to update the email with one that is already in use:

This document may contain confidential and/or proprietary information and is intended to be used only by licensed Landmark users. Any use by others is strictly prohibited.

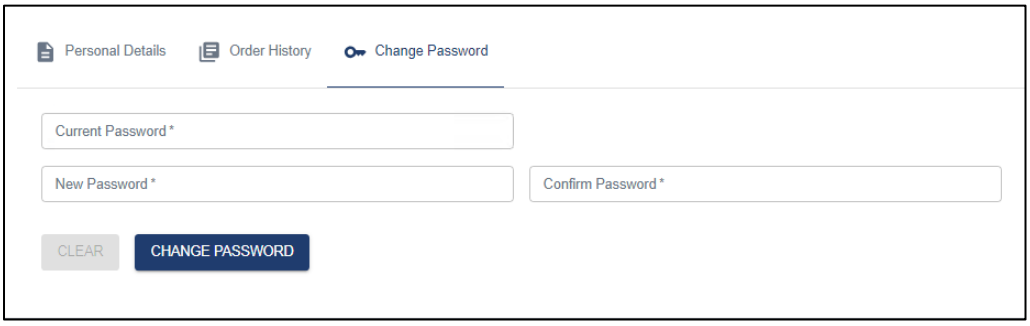

Successful attempt to update the email with one that is not already in use:

LAN-1205: My Account Page – Change Password Tab

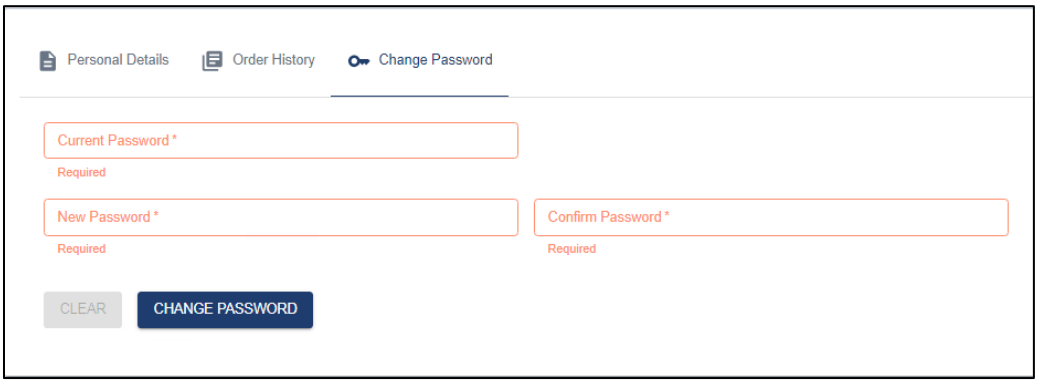

Request Details: Ensure users can change their passwords efficiently while receiving clear immediate feedback on the action's outcome.

Resolution: Added the Change Password tab to My Account Page. In this screen, users can change their passwords efficiently by entering the current password, new and confirmation passwords and clicking on the Change Password button. Notice a Clear button is also available for the user to reset the form:

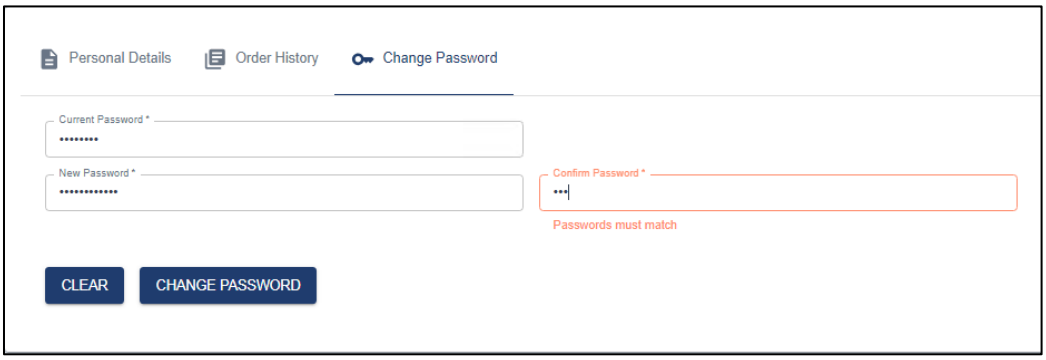

Implemented validation checks to ensure all required fields are filled (current password, new password, and confirm password):

This document may contain confidential and/or proprietary information and is intended to be used only by licensed Landmark users. Any use by others is strictly prohibited.

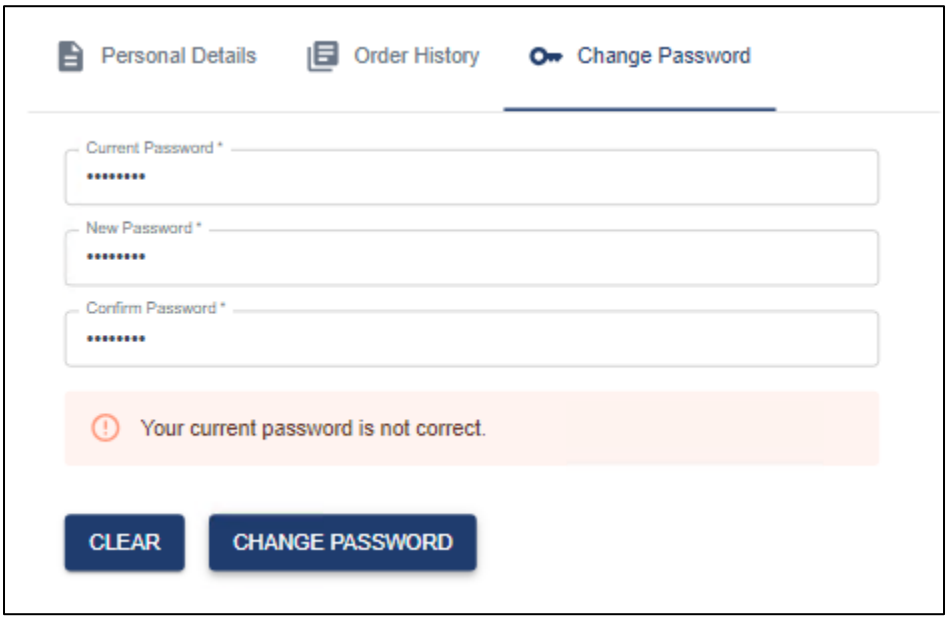

Added validation to verify the new password and confirm password fields match:

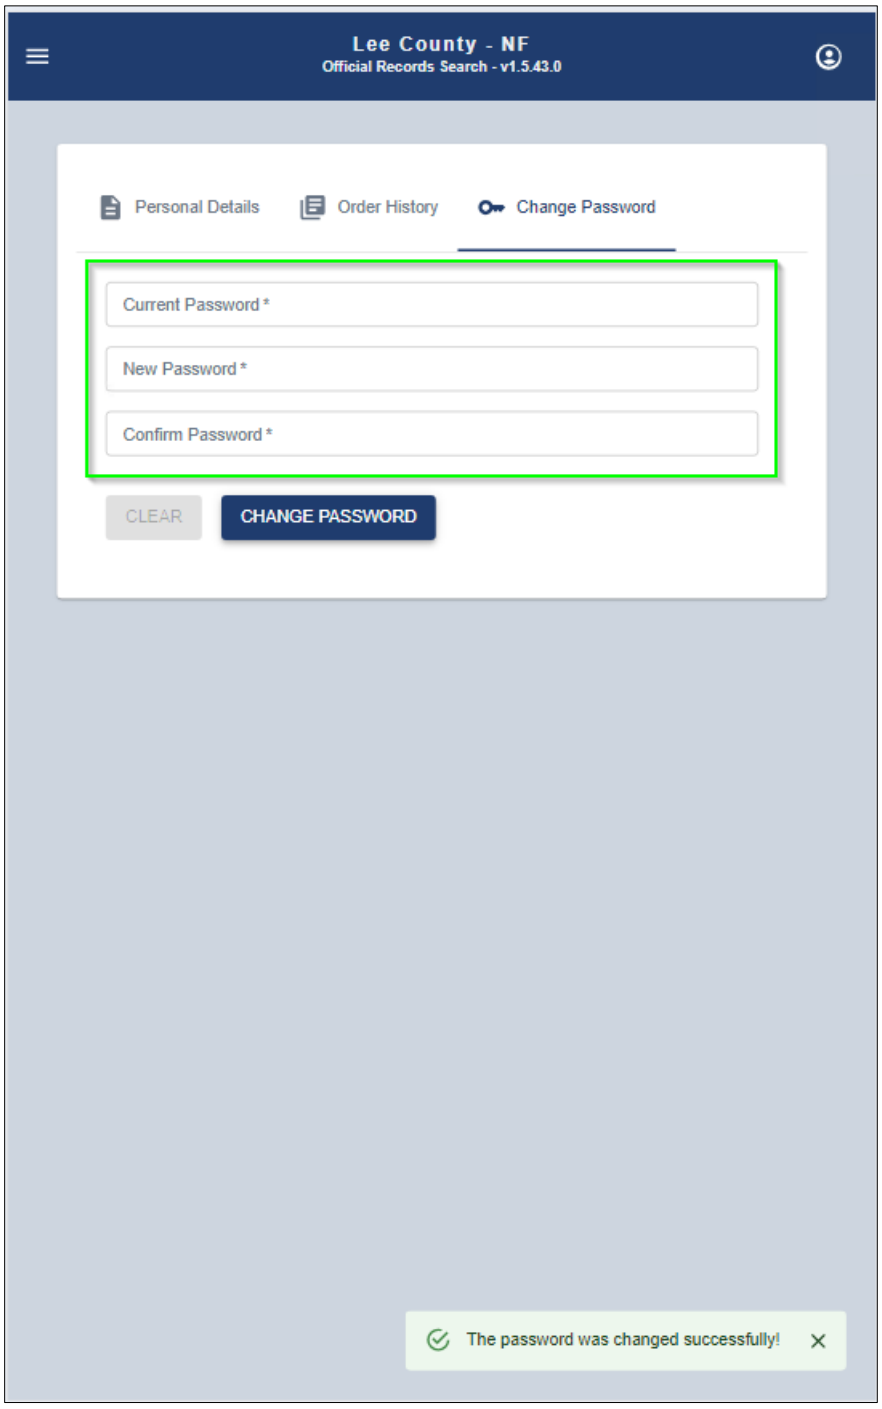

Implemented notifications to inform the user of the success or failure of their password change attempt. This includes displaying specific error messages related to the nature of the failure.

Incorrect current password notification:

This document may contain confidential and/or proprietary information and is intended to be used only by licensed Landmark users. Any use by others is strictly prohibited.

The form fields are reset to their initial state following a successful password change to clear sensitive data from the interface and prepare for any future changes. Notice the successful password change notification is also displayed:

This document may contain confidential and/or proprietary information and is intended to be used only by licensed Landmark users. Any use by others is strictly prohibited.

Release 1.5 Service Pack 32

Corrected Issues

N/A

This document may contain confidential and/or proprietary information and is intended to be used only by licensed Landmark users. Any use by others is strictly prohibited.

Added Features

LAN-1192: Implement Backend Logic for Fraud Alert Registration Endpoint

Request Details: Implement the backend logic for the Fraud Alert Registration process, this should handle different Fraud Alert types, incoming requests, including request data validation. This should also include the email notification process when successful registration process is generated.

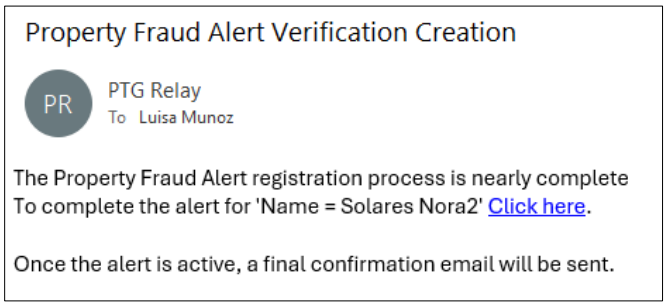

Resolution: Added the backend logic for the Fraud Alert Registration process, this allows the system to handle different Fraud Alert types, with their incoming request and data validations. This solution also includes a dynamic email notification process to advise users about the next steps when a Fraud Alert Registration process is successful.

LAN-1193: Implement Email Notification and Validation for Fraud Alert Registration

Request Details: Implement functionality to send an email notification to users after they register a Fraud Alert. The email should include a validation link. When clicked, this link should take the user to a specific page confirming that their Fraud Alert has been successfully validated.

Resolution: Implemented functionality to send an email notification after the user registers a Fraud Alert. The email notification includes a link labeled 'Click here', the user can click this link to complete the process.

Email notification.

This document may contain confidential and/or proprietary information and is intended to be used only by licensed Landmark users. Any use by others is strictly prohibited.

Confirmation page.

Confirmation email.

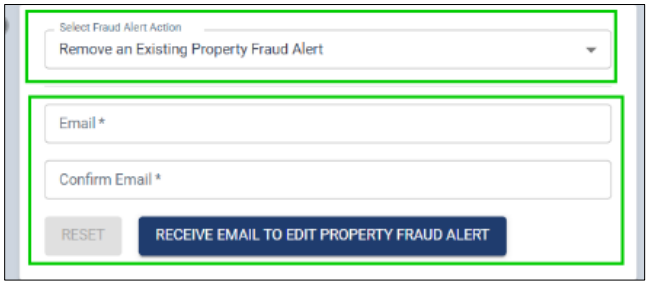

LAN-1194: Fraud Alert Page - Unregister Existing Fraud Alert Registration - Front End & Back End

Request Details: Implement the process that should allow the user to unregister a Personal or Business Fraud Alert, this function should present an entry data form that requires only the email address associated with the Fraud Alert and should include the needed email address format validations. This process should generate an email listing all Fraud Alert associated with the email address.

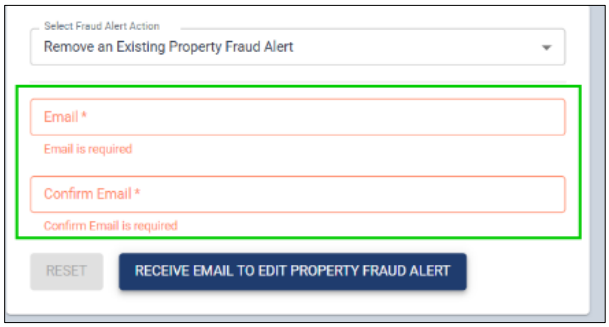

Resolution: Added the ability to unregister a Personal or Business Fraud Alert using the email address associated with it. This process sends an email with the corresponding Fraud Alert data. When there is more than one Fraud Alert associated with the given email address, existing Personal or Business Fraud Alert are listed on the email. When there is no Personal or Business Fraud Alert associated with the given email address, the user is informed. Additionally, “Reset” button is implemented to clear the email address data filled in by the user.

This document may contain confidential and/or proprietary information and is intended to be used only by licensed Landmark users. Any use by others is strictly prohibited.

Unregister Fraud Alert Form.

Email required validation.

Unregister Fraud Alert successful message

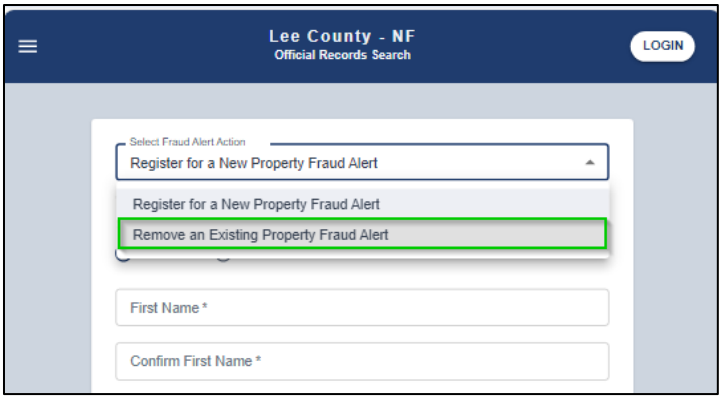

LAN-1195: Fraud Alert - Send Notification Email to Complete the Unregister Process

Request Details: The system should send an email notification with a validation link. When clicked, this link should redirect the user to a page that confirms the successful unregistration of the fraud alert.

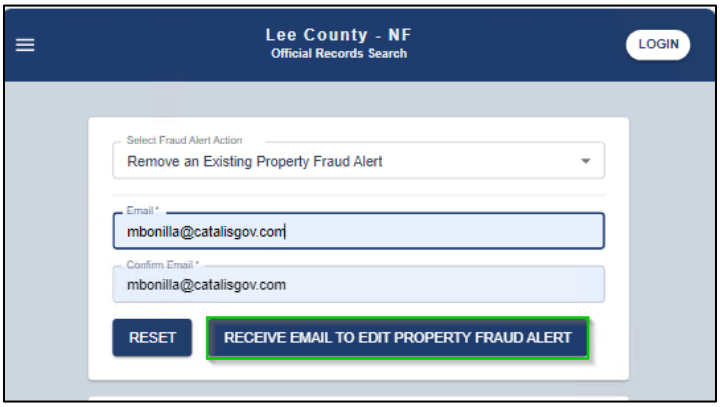

Resolution: Implemented functionality to send an email notification with a validation link. When clicked, this link will redirect the user to a page that confirms the successful unregistration of the fraud alert.

In the Fraud Alert Screen, select the Fraud Alert Action, “Remove an Existing Property Fraud Alert”:

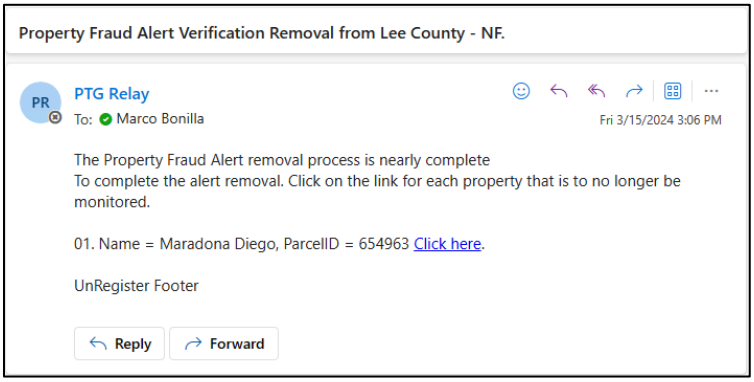

This document may contain confidential and/or proprietary information and is intended to be used only by licensed Landmark users. Any use by others is strictly prohibited.

Enter an email associated to name/address registered for the fraud alert and click on the "Receive Email to Edit Property Fraud Alert":

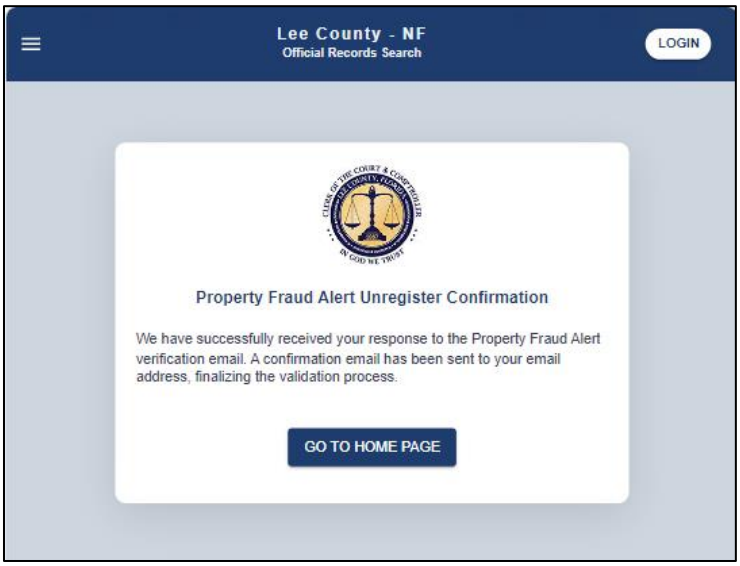

A "Property Fraud Alert Verification Removal" email is sent to the entered email. It contains instructions to complete the removal process and a link next to the name/address for the user to decide to complete the unregister process of that data:

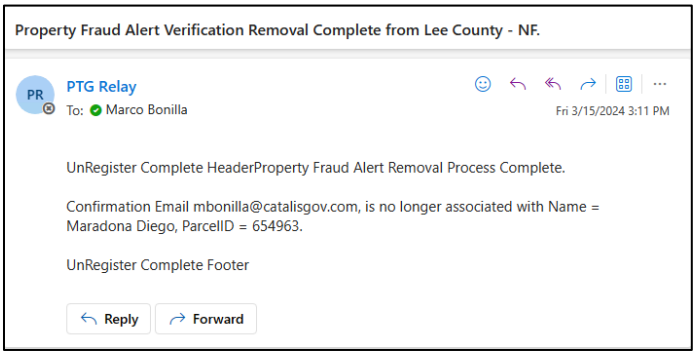

After clicking the link for the removal of the desired name/address, the user is redirected to the Property Fraud Alert Unregister Confirmation screen. It displays a message indicating the response has been successfully received and a confirmation email has been sent, finalizing the validation process:

This document may contain confidential and/or proprietary information and is intended to be used only by licensed Landmark users. Any use by others is strictly prohibited.

Then, as indicated in the removal confirmation screen, a “Property Fraud Alert Verification Removal Complete” email is sent, finalizing the unregister process:

LAN-1196: Implement UI for Fraud Alert Registration Page

Request Details: Add functionality to allow users to register a new Fraud Alert, this should allow the users to create a new Personal or Business Fraud Alert, the form implemented should require the relevant information for each type and should perform the corresponding validations displaying clear error messages to help the user to correct any mistake.

Resolution: Added the ability to register a new Personal or Business Fraud Alert allowing the user to set what information is required on the registration form, the required information for the Fraud Alert is defined using the following settings: **ShowMiddleNameOnWebForFraudAlert**, **WebShowFraudAlertAddress**, **WebShowFraudAlertLegalDescription**, **WebShowFraudAlertParcelID**, and **WebShowFraudAlertPhoneNumber**. These settings can have the value true or false, when the setting is true the corresponding field(s) is displayed on the form and include all needed validations, when the setting is false corresponding field(s) is hidden. Implemented process to verify user’s email address and finalize the Fraud Alert setup.

This document may contain confidential and/or proprietary information and is intended to be used only by licensed Landmark users. Any use by others is strictly prohibited.

Release 1.5 Service Pack 31

Corrected Issues

N/A

This document may contain confidential and/or proprietary information and is intended to be used only by licensed Landmark users. Any use by others is strictly prohibited.

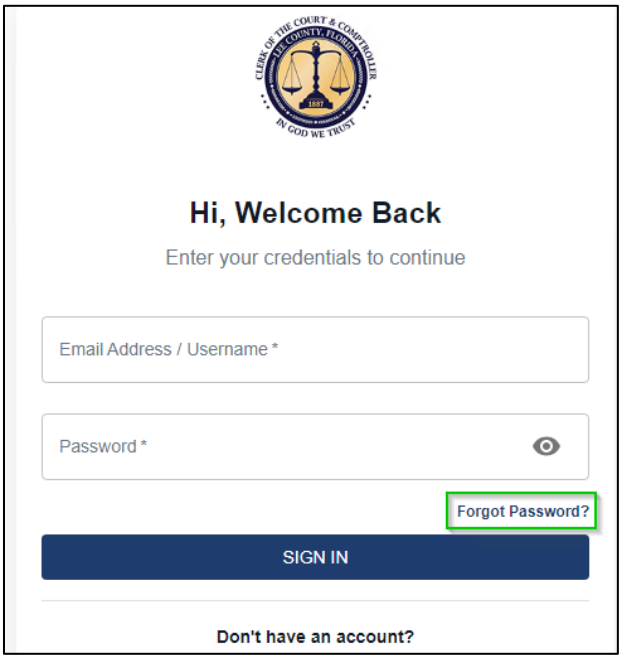

Added Features

LAN-1206: Implement Forgot Password Email Reset Functionality

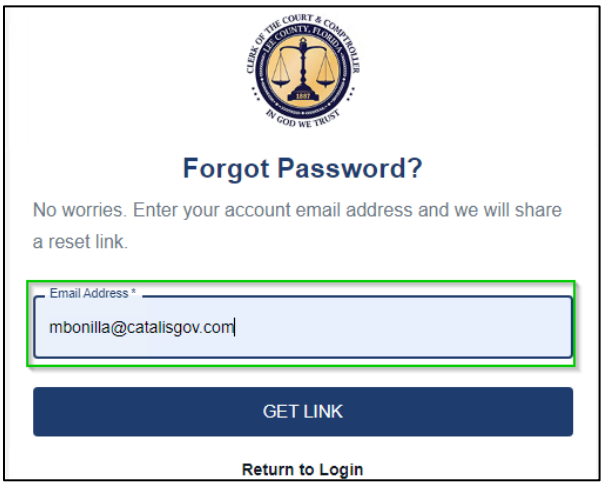

Request Details: Implement the 'Forgot Password' feature, enabling users to request a password reset via email containing the new password.

Resolution: Added ability to request a password reset via email.

Find the link: “Forgot Password?” on the Login Screen:

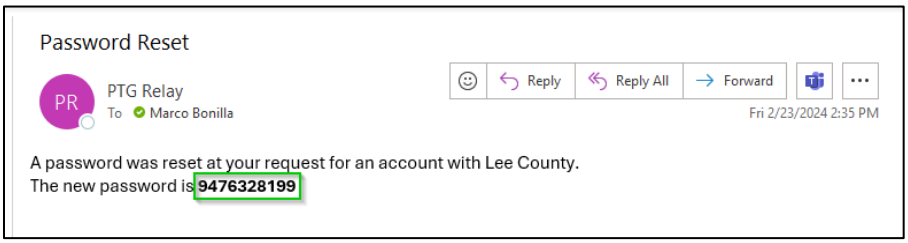

It redirects the user to the “Forgot Password?” screen. User is able to enter the account email and then click on the “Get Link” button:

This document may contain confidential and/or proprietary information and is intended to be used only by licensed Landmark users. Any use by others is strictly prohibited.

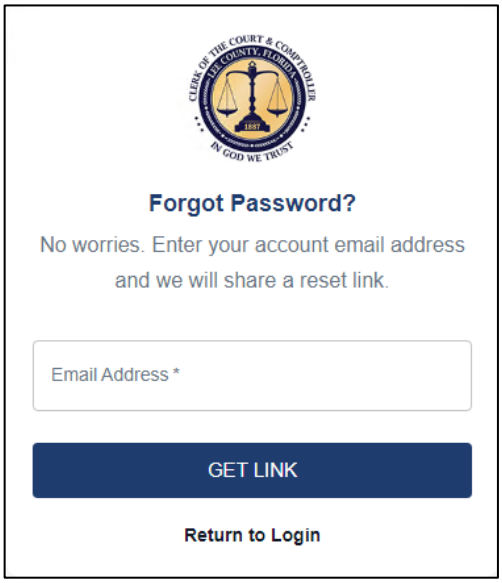

Afterwards, the user receives an email containing the new password resulted of the password reset process. The user can now log in entering this password :

LAN-1207: Front-End Implementation Forgot Password Feature

Request Details: Implement the front-end components for the 'Forgot Password' feature. This includes creating a dedicated page where users can request a password reset and ensuring a seamless user experience.

Resolution: Implemented the front-end components for the 'Forgot Password' feature. Added a dedicated page where users can request a password reset and ensure a seamless user experience and screen responsiveness.

This document may contain confidential and/or proprietary information and is intended to be used only by licensed Landmark users. Any use by others is strictly prohibited.

Release 1.5 Service Pack 30

Corrected Issues

N/A

This document may contain confidential and/or proprietary information and is intended to be used only by licensed Landmark users. Any use by others is strictly prohibited.

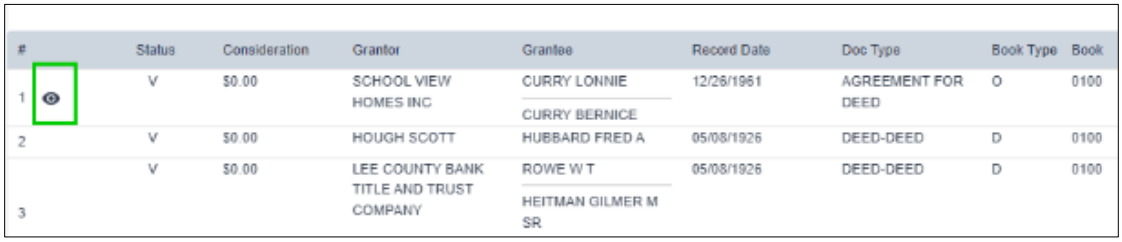

Added Features

LAN-1169: Table Component “Record Viewed” Column Functionality

Request Details: Add the “Record Viewed” icon on the Search Results grid after the user has viewed the document details page, the icon should be displayed for the corresponding opened document. The icon should be displayed for each document viewed and remain displayed when the user navigates on the application options and should disappear when the page is reloaded, or a new search is performed. This functionality should be implemented only for large screen size devices.

Resolution: Added the “Record Viewed” icon between the columns number and Status in the Search Results grid after opening the document details page. The icon is displayed after viewing the document details and remains displayed when user navigate on the application, the icon disappears when the user logs out or reloads the application using the reload button on the browser.

Record Viewed icon.

#		Status	Consideration	Grantor	Grantee	Record Date	Doc Type	Book Type	Book

LAN-1202: User Register Page – New Account Email – Validate Account Email

Request Details: Add the process to validate an Account Email. This process will send a Validation Email to the User’s email address upon registration. The email should include a validation link that is generated for each registration process and instructions on how to proceed. When users try to login without a validated Account Email, appropriate error messages should be displayed, when an invalid validation link is utilized, user will get appropriate error message displayed.

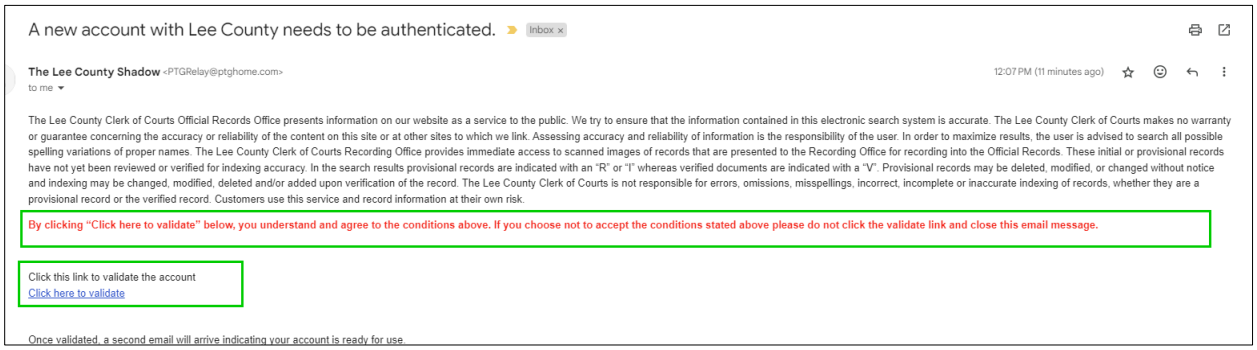

Resolution: Added the ability to validate an Account for a new account registration process. This validation process sends an email to the Email Account used on registration. The validation email contains the next steps and a link that is generated exclusively for this account. When the user clicks the validation link, this updates the authenticated account status, this allows users to Login on the application. If users try to login without authentication an appropriate error message is generated. Validation links can be used only once, and validation links do not expire.

This document may contain confidential and/or proprietary information and is intended to be used only by licensed Landmark users. Any use by others is strictly prohibited.

This document may contain confidential and/or proprietary information and is intended to be used only by licensed Landmark users. Any use by others is strictly prohibited.

LAN-1271: Enhance Table View with Custom Columns for Different Search Types

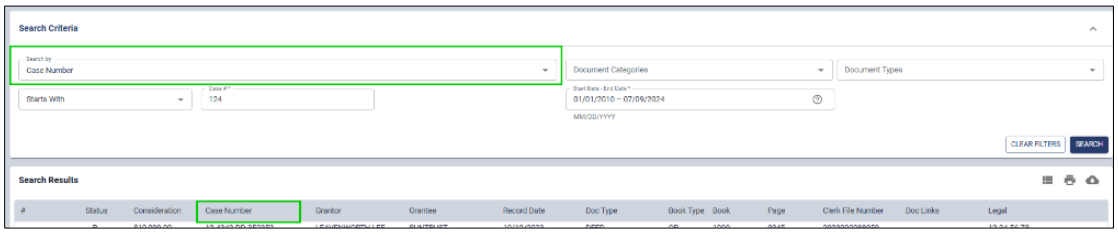

Request Details: Add the ability to display columns based on the search type selected, Search Results table should display the following general columns: “Status”, “Consideration”, “Grantor”, “Grantee”, “Record Date”, “Doc Type”, “Book Type”, “Book”, “Page”, “Clerk File Number”, “Doc Links”, and “Legal”. There are special behaviors in the following search types: “Name” and “Quick Search”, the column “Search Name” should be displayed, “Case Number” the column “Case Number” should be displayed. This functionality is implemented for large screen size devices.

Resolution: Added the ability to see the columns based on the search type performed, displaying the Search Results as a table, with the default columns, and displaying new columns when special search type is performed. Columns will be displayed depending on the search type and are updated when the Search button is pressed. By default, the system will keep columns displayed on previous search results.

Special search behavior Search by “Name” or Search by “Quick Search”.

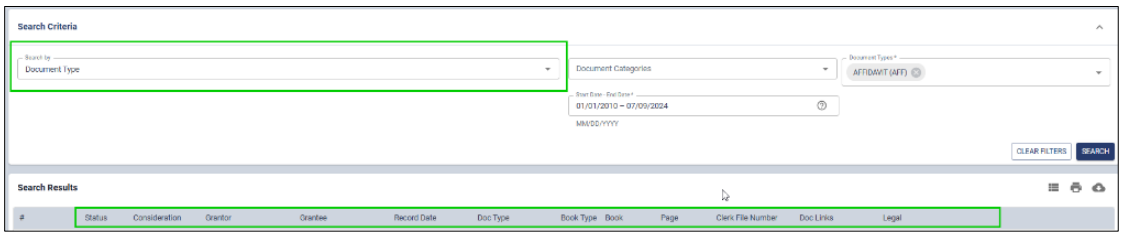

Special search behavior Search by “Case Number”.

This document may contain confidential and/or proprietary information and is intended to be used only by licensed Landmark users. Any use by others is strictly prohibited.

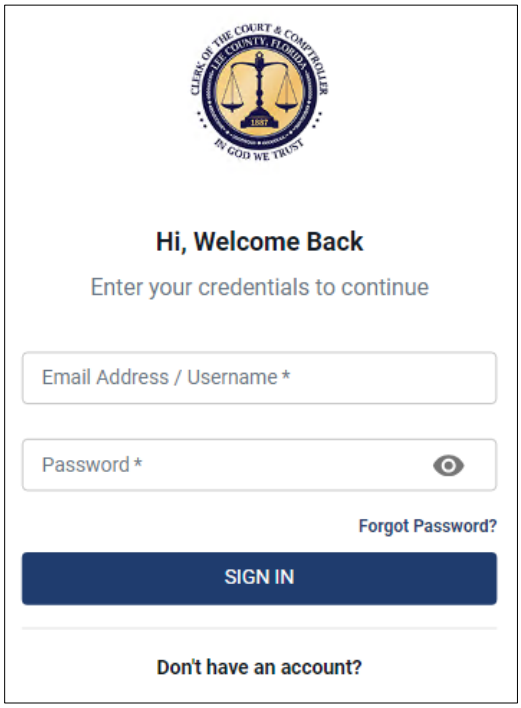

General Columns. E.g.

LAN-1272: Design and Implement Enhanced User Authentication on Login Page

Request Details: Add the ability to log in using credentials, if necessary, users should be able to reset their password or create a new account.

Resolution: Added the ability to log in to the mobile application. Added input fields for "Email Address / Username" and "Password", both marked with an asterisk to denote they are required fields. A “Forgot Password?” link will be positioned closely to the password input for easy access in case users need to reset their credentials. A "Don’t have an account?" link will be displayed with a call to action for new users to create an account. Clickable logo at the top will redirect the user to the Search page.

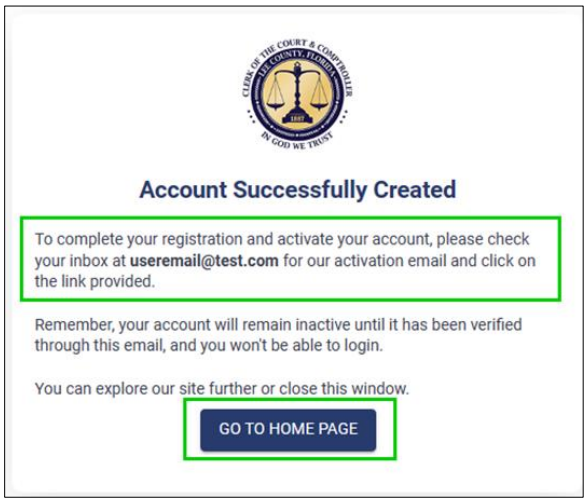

LAN-1276: Implementation of User Registration Confirmation Page with Fallback Mechanism

Request Details: Add a Confirmation page, this should be displayed after successful User Registration; Confirmation page should include “Go to Home Page” button, user’s email address used in registration process and instructions for next steps. This Confirmation page should have

This document may contain confidential and/or proprietary information and is intended to be used only by licensed Landmark users. Any use by others is strictly prohibited.

a fallback mechanism for scenarios where users navigate directly to this, without completing the registration process.

Resolution: Added the Confirmation page which is displayed when a successful Registration process is completed. Additionally, when users try to access directly to this page, they are redirected to the Search page on the application.

This document may contain confidential and/or proprietary information and is intended to be used only by licensed Landmark users. Any use by others is strictly prohibited.

N/A

This document may contain confidential and/or proprietary information and is intended to be used only by licensed Landmark users. Any use by others is strictly prohibited.

Added Features

LAN-1155: Optimize ‘Search by Name’ Result Filtering

Request Details: Implement a Search by Name option that allows users to filter based on a given Name and selected parameters like Party Type, Book Type and Date Range.

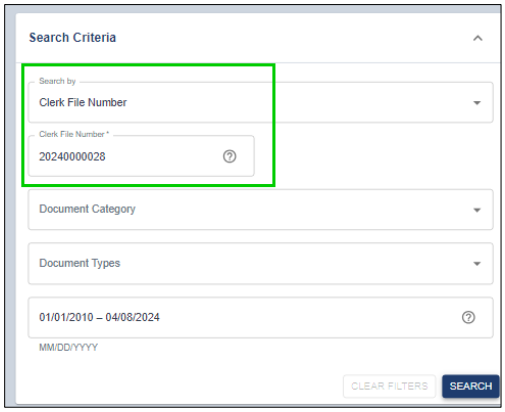

Resolution: Added the ability to select a Search by Name, the given Name is the unique mandatory field for this type of search. Other parameters could be selected, results are displayed according to selected parameters.

LAN-1156: Optimize 'Clerk File Number' Result Filtering

Request Details: Implement a Search by Clerk File Number option that allows users to filter starting on the Clerk File Number given.

Resolution: Added the ability to select a Search by Clerk File Number, the given Clerk File Number is the unique mandatory field for this type of search. Search Results displayed are those where the Clerk File Number is equal to or greater than the given Clerk File Number.

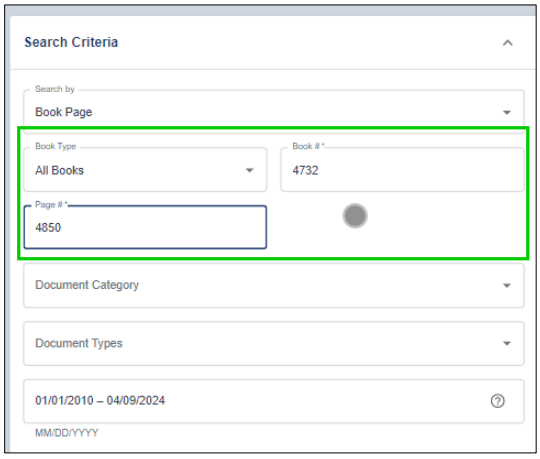

This document may contain confidential and/or proprietary information and is intended to be used only by licensed Landmark users. Any use by others is strictly prohibited.

LAN-1157: Optimize ‘Search by Book Page’ Result Filtering

Request Details: Implement a Search by Book Page option that allows users to filter all records by the exact Book Number and Page Number as Start Point.

Resolution: Added the ability to select a Search by Book Page, for this search type, Book Type, Book Number and Page Number are mandatory fields. Search Results displayed are those where the Book Type has a Book with that Number, and the Page Number is the starting point. The default value for Book Type is All Book Types.

LAN-1158: Optimize 'Search by Consideration' Result Filtering

Request Details: Implement a Search by Consideration option that allows users to filter all records by Lower and Upper bounds.

Resolution: Added the ability to search by consideration, for this search type, Lower Bound and Upper Bound fields are required. In the “Search by Consideration" type, filtered results are aligned with those in the Web application.

Note: This ticket was not tested by QA due to pending SQL Server configuration.

LAN-1159: Optimize 'Search by Case Number' Result Filtering

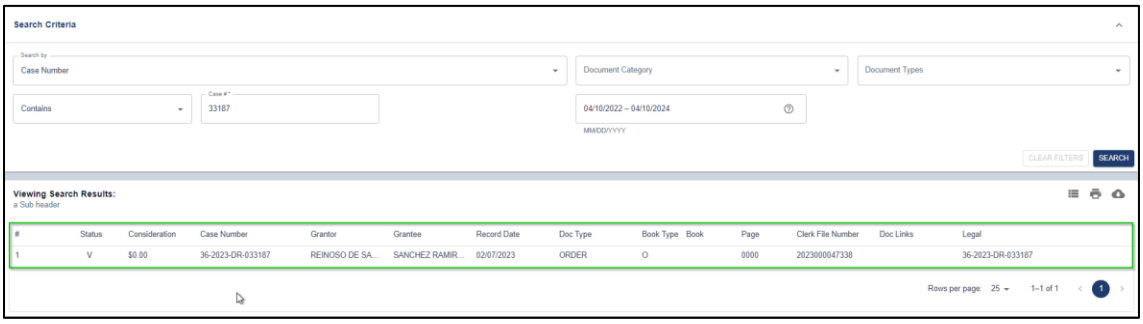

Request Details: Implement a Search by Case Number option that allows users to filter all records by Case Number.

Resolution: Added the ability to search by case number, for this search type, Case # field is required. The results filtering is aligned with those from Web application.

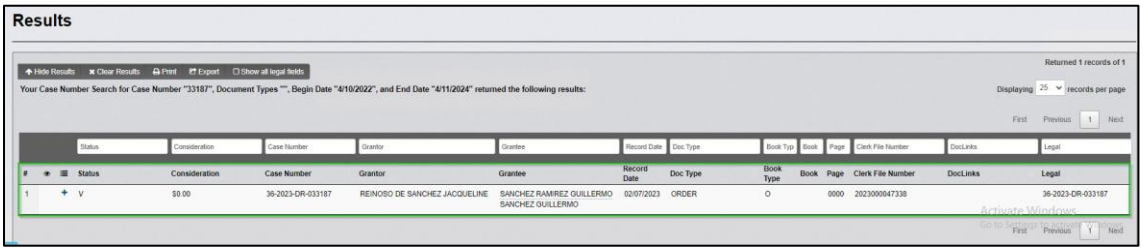

Notice the results of the same filtered Case Number search performed in the mobile application and the reference site match.

This document may contain confidential and/or proprietary information and is intended to be used only by licensed Landmark users. Any use by others is strictly prohibited.

Mobile app:

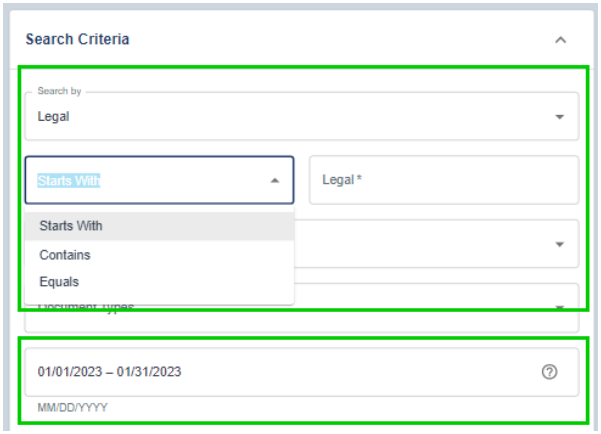

Reference site:

LAN-1161: Optimize ‘Search by Legal’ Result Filtering

Request Details: Implement a Search by Legal option that allows users to filter all records based on the Legal value, excluding Document Type and Document Category filters.

Resolution: Added the ability to search by Legal value, for this search type, 3 different operators were added, Starts With, Contains and Equals, Legal field is required. This search also takes the date range as part of the filter on the results. Document Type and Document Category filters are not part of the filters, even when those filters are selected.

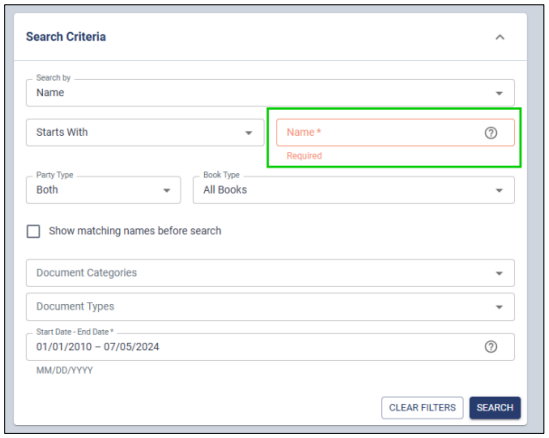

This document may contain confidential and/or proprietary information and is intended to be used only by licensed Landmark users. Any use by others is strictly prohibited.

LAN-1163: Implement Validation for Required Fields on Each Search Type

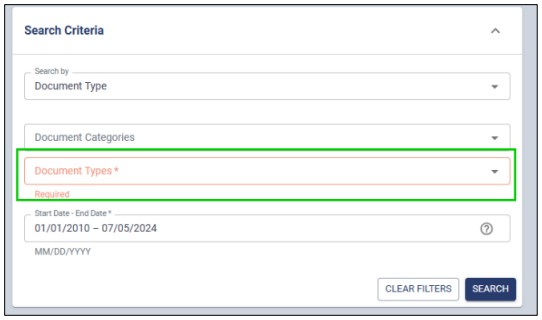

Request Details: For each “Search Type” available add the corresponding required notation for the required data filters, this required notation implies displaying the required alert when corresponding filter fields are missed.

Resolution: Added validation data filters for each “Search Type” to inform the user what filter fields are mandatory and display an alert when the user does not fill the corresponding mandatory filter. The same solution was implemented for Mobile application on all screen sizes.
