Release 1.5 Service Pack 5

Corrected Issues

N/A

This document may contain confidential and/or proprietary information and is intended to be used only by licensed Landmark users. Any use by others is strictly prohibited.

Added Features

LAN-1318: DocumentNonRecordableIndicator Set to Y when Misc-DocType is Sent Back to Simplifile

Request Details: DocumentNonRecordableIndicator needs to be set to “Y” if Miscellaneous document type is being sent back to Simplifile.

Resolution: Miscellaneous eRecord documents returned will now return DocumentNonRecordableIndicator='Y' in the XML file.

This document may contain confidential and/or proprietary information and is intended to be used only by licensed Landmark users. Any use by others is strictly prohibited.

Release 1.5 Service Pack 4

Corrected Issues

105580: TAXABLE_PARTY Missing fron King, WA eRecord Packages

Expected Result: When SimpliFile or another vendor does not include the TAXABLE_PARTY in an Excise Tax eRecord package, the system should not encounter a null reference error and still process the item.

Resolution: Added a fix so the system does not error out when TAXABLE_PARTY is not included in the package.

108671: Pending Packages Issue

Expected Result: ERecords should not receive errors due to stamping timing issues.

Resolution: Added setting **ERecordStatusImageStampDelay** that sets a time delay for when to check if images have been stamped before returning posted status to eRecord partners.

This document may contain confidential and/or proprietary information and is intended to be used only by licensed Landmark users. Any use by others is strictly prohibited.

Added Features

10043: Return Pending eRecord Status if Transaction Open in eRecord Queue

Request Details: The service should return a PENDING status if the transaction is currently open in the eRecord Queue with a suspense. If the transaction is not currently open and has a suspense, then it can return the reject status with reason.

Resolution: The service will return “PENDING” for suspended transaction if they are still open in the queue. This prevents false rejections.

11434: Ability to Control Time Frames when eRecording Submitters Cannot Retrieve Packages

Request Details: Add a feature that creates a time frame in which the service will allow status checks and retrieve calls to be made. A status of “PENDING” will be returned for all transaction queried during this time frame.

Resolution: Added new setting **ERecordBlackoutWindows** to control the time frame that the service will return “PENDING” for all status checks. When a blackout time is in effect, the service will return "PENDING" even for posted packages. In the event a blank crossref is used for checking, the system will return "INVALID CROSSREF". If the package does not exist, the service will still return a "NOT SUBMITTED" during a blackout.
Time ranges can be delimited by pipes for multiple time frames.
Uses 24 hour time format.
Example:
Single Time Range:
096:00-10:00
Multiple Time Range:
11:00-12:00|16:00-17:00

SettingKey	SettingValue
ERecordBlackoutWindows	09:00-09:05|09:30-09:40

This document may contain confidential and/or proprietary information and is intended to be used only by licensed Landmark users. Any use by others is strictly prohibited.

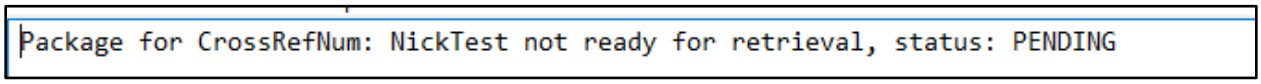

Release 1.5 Service Pack 0

Corrected Issues

103489: Missing Images Message

Expected Result: When the eRecord service is unavailable, records are being returned with a "There is no end point listening at..." message.

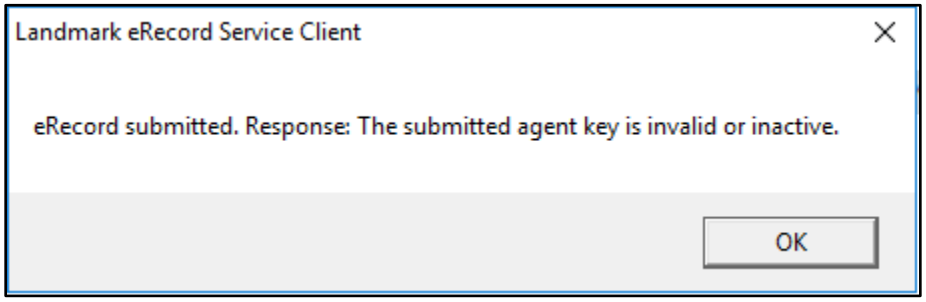

Resolution: If a record is created in Landmark and the eRecord service is unavailable, records that are returned through the service with a message that the record is pending.

103524: Invalid eRecord Agent

Expected Result: When an agent is set to either inactive or to not allow eRecord submission, the eRecord service should not submit a record.

Resolution: If an eRecord record with an inactive or invalid agent is submitted, the eRecord service will display a message. The service now specifically checks for "Active" and "AllowERecordSubmission" to be true on agents in the Agents table.

103748: Duplicate Entries

Expected Result: Users should not be able to send duplicate entries to the eRecord service.

Resolution: Added a duplicated prevention that will prevent the service from creating multiple entries with the same cross reference number in the eRecord table. The service will display the status of the existing entry, rather than create a new row.

104039: Original Images

Expected Result: When images are returned from the eRecord service, users should be able to receive both the normal and original image.

Resolution: Users will now have the ability to choose whether they receive the normal or original image from the service. Added new setting **ERecordReturnOriginalImages.** When this setting is set to true, users will receive the original image. When the setting is set to false, users will receive the normal image.

This document may contain confidential and/or proprietary information and is intended to be used only by licensed Landmark users. Any use by others is strictly prohibited.

Added Features

11016: DocumentType in Return XML

Request Details: When the documenttype is changed during the eRecord process, users would like the new documenttype to appear in the eRecord service return XML.

Resolution: Updated the return XML so it will display the Code and DocumentType that were entered or changed in Landmark.

This document may contain confidential and/or proprietary information and is intended to be used only by licensed Landmark users. Any use by others is strictly prohibited.
